OFA is a semantic standard; it provides business building blocks and defines them in business terms. It provides a business view on both the business and application architectures. This second edition not only includes the more recent deliverables, it also takes a stepped approach through the different topics. It aims to be more appealing to a business audience by addressing the building blocks of OFA and their possible use in business terms, whilst also including many real life examples of OFA usage. As such, it should not only appeal to application and business architects but also to their managers, their business partners and other stakeholders who work closely with them. The first part of the book focuses on the theory: OFA organization, the principles and patterns on which its architecture is based, and its building blocks. The second part of the book explains, in methodology independent terms, how OFA can be applied in different architectural layers by different disciplines in co operation with architects. This part of the book includes a number of practical examples intended to improve the reader's understanding of the building blocks of the OFA architecture and encourage them to apply it for the benefit of their own organization. The final part of the book should inspire the reader even further by clearly illustrating the synergy between the content that OFA delivers and the architecture methodology provided by TOGAF.
