this volume presents a variety of perspectives from within and outside moral psychology recently there has been an explosion of research in moral psychology but it is one of the subfields most in need of bridge building both within and across areas interests in moral phenomena have spawned several separate lines of research that appear to address similar concerns from a variety of perspectives the contributions to this volume examine key theoretical and empirical issues these perspectives share that connect these issues with the broader base of theory and research in social and cognitive psychology the first two chapters discuss the role of mental representation in moral judgment and reasoning sloman fernbach and ewing argue that causal models are the canonical representational medium underlying moral reasoning and mikhael offers an account that makes use of linguistic structures and implicates

legal concepts bilz and nadler follow with a discussion of the ways in which laws which are typically construed in terms of affecting behavior exert an influence on moral attitudes cognition and emotions baron and ritov follow with a discussion of how people s moral cognition is often driven by law like rules that forbid actions and suggest that value driven judgment is relatively less concerned by the consequences of those actions than some normative standards would prescribe iliev et al argue that moral cognition makes use of both rules and consequences and review a number of laboratory studies that suggest that values influence what captures our attention and that attention is a powerful determinant of judgment and preference ginges follows with a discussion of how these value related processes influence cognition and behavior outside the laboratory in high stakes real world conflicts two subsequent chapters discuss further building blocks of moral cognition lapsley and narvaez discuss the development of moral characters in children and reyna and casillas offer a memory based account of moral reasoning backed up by developmental evidence their theoretical framework is also very relevant to the phenomena discussed in the sloman et al baron and ritov and iliev et al chapters the final three chapters are centrally focused on the interplay of hot and cold cognition they examine the relationship between recent empirical findings in moral psychology and accounts that rely on concepts and distinctions borrowed from normative ethics and decision theory connolly and hardman focus on bridge building between contemporary discussions in the judgment and decision making and moral judgment literatures offering several useful methodological and theoretical critiques ditto pizarro and tannenbaum argue that some forms of moral judgment that appear objective and absolute on the surface are at bottom more about motivated reasoning in service of some desired conclusion finally bauman and skitka argue that moral relevance is in the eye of the perceiver and emphasize an empirical approach to identifying whether people perceive a given judgment as moral or non moral they describe a number of

behavioral implications of people's reported perception that a judgment or choice is a moral one and in doing so they suggest that the way in which researchers carve out the moral domain a priori might be dubious

utopias and the environment explores the way in which the kind of dreaming or re-visioning known as the utopian imaginary takes environmental concerns into account this kind of creative intervention is increasingly important in an era of ecological crisis as we witness the failure of governments worldwide to significantly change industrial civilization from a path of business as usual in this context it is up to the artists in this case authors to imagine new ways of being that respond to this imperative and immediate global issue concurrently it is also up to critics readers and thinkers everywhere to appraise these narratives of possibility for their complexities and internal conflicts as well as for their promise as we enter this new era of rapid change and adaptation because creative and critical thinkers must work together towards this goal the idea of the critical utopia coined by Tom Moylan in response to the fiction of the 1970s is now ingrained in the common argot and is one of the key ideas discussed in this book this development in the genre which combines self-reflexivity and multiple perspectives within its dreaming represents the postmodern spirit in its most regenerative aspect this book is testament to such hopes and potential realities this book was originally published as a special issue of *Green Letters*

the field of cognitive modeling has progressed beyond modeling cognition in the context of simple laboratory tasks and begun to attack the problem of modeling it in more complex realistic environments such as those studied by researchers in the field of human factors the problems that the cognitive modeling community is tackling focus on modeling certain problems of communication and control that arise when integrating with the external environment factors such as implicit and explicit knowledge

emotion cognition and the cognitive system these problems must be solved in order to produce integrated cognitive models of moderately complex tasks architectures of cognition in these tasks focus on the control of a central system which includes control of the central processor itself initiation of functional processes such as visual search and memory retrieval and harvesting the results of these functional processes because the control of the central system is conceptually different from the internal control required by individual functional processes a complete architecture of cognition must incorporate two types of theories of control type 1 theories of the structure functionality and operation of the controller and type 2 theories of the internal control of functional processes including how and what they communicate to the controller this book presents the current state of the art for both types of theories as well as contrasts among current approaches to human performance models it will be an important resource for professional and student researchers in cognitive science cognitive engineering and human factors contributors kevin a gluck jerry t ball michael a krusmark richard w pew chris r sims vladislav d veksler john r anderson ron sun nicholas l cassimatis randy j brou andrew d egerton stephanie m doane christopher w myers hansjörg neth jeremy m wolfe marc pomplun ronald a rensink hansjörg neth chris r sims peter m todd lael j schooler wai tat fu michael c mozer sachiko kinoshita michael shettel alex kirlik vladislav d veksler michael j schoelles jerome r bussemeyer eric dimperio ryan k jessup jonathan gratch stacy marsella glenn gunzelmann kevin a gluck scott price hans p a van dongen david f dinges frank e ritter andrew l reifers lara cousino klein michael j schoelles eva hudlicka hansjörg neth christopher w myers dana ballard nathan sprague laurence t maloney julia trommershäuser michael s landy a hornof michael j schoelles david kieras dario d salvucci niels taatgen erik m altmann richard a carlson andrew howes richard l lewis alonso vera richard p cooper and michael d byrne
