we examine patterns of regional adjustments to shocks in the us during the past 40 years using state level data we estimate the dynamic response of regional employment unemployment participation rates and net migration to state relative labor demand shocks we find that i the long run effect of a state specific shock on the state employment level has decreased over time suggesting less overall net migration in response to a regional shock ii the role of the participation rate as absorber of regional shocks has increased iii the response of net migration to regional shocks is stronger

while that of relative unemployment is weaker during aggregate downturns and iv the change in the response intensity of migration is related to the declining trend in regional dispersion of labor market conditions finally using regional data for a set of 21 european countries we show that while the short term response of participation rates to labor demand shocks is typically larger in europe than in the us the immediate response of net migration in europe has increased over time
