these proceedings comprise two workshops celebrating the accomplishments of david j benson on the occasion of his sixtieth birthday the papers presented at the meetings were representative of the many mathematical subjects he has worked on with an emphasis on group presentations and cohomology the first

workshop was titled groups representations and cohomology and held from june 22 to june 27 2015 at sabhal m r ostaig on the isle of skye scotland the second was a combination of a summer school and workshop on the subject of geometric methods in the representation theory of finite groups and took place at the pacific institute for the mathematical sciences at the university of british columbia in vancouver from july 27 to august 5 2016 the contents of the volume include a composite of both summer school material and workshop derived survey articles on geometric and topological aspects of the representation theory of finite groups the mission of the annually sponsored summer schools is to train and draw new students and help ph d students transition to independent research

a recurring theme in a traditional introductory graduate algebra course is the existence and consequences of relationships between different algebraic structures this is also the theme of this book an exposition of connections between representations of finite partially ordered sets and abelian groups emphasis is placed throughout on classification a description of the objects up to isomorphism and computation of representation type a measure of when classification is feasible david m arnold is the ralph and jean storm professor of mathematics at baylor university he is the author of finite rank torsion free abelian groups and rings published in the springer verlag lecture notes in mathematics series a co editor for two volumes of conference proceedings and the author of numerous articles in mathematical research journals his research interests are in abelian group theory and related topics such as representations of partially ordered sets and modules over discrete valuation rings subrings of algebraic number fields and pullback rings he received his ph d from the university of illinois urbana and was a member of the faculty at new mexico state university for many years

this volume contains articles based on talks given at the robert brooks memorial conference on geometry and spectral theory and the workshop on groups geometry and dynamics held at technion the israel institute of technology haifa robert brooks 1952 2002 broad range of mathematical interests is represented in the volume which is devoted to various aspects of global analysis spectral theory the theory of riemann surfaces riemannian and discrete geometry and number theory a survey of brooks work has been written by his close colleague peter buser also included in the volume are articles on analytic topics such as szego s theorem and on geometric topics such as isoperimetric inequalities and symmetries of manifolds the book is suitable for graduate students and researchers interested in various aspects of geometry and global analysis

this volume provides a selection of previously published papers and manuscripts of uno kaljulaid an eminent estonian algebraist of the last century the central

part of the book is the english translation of kaljulaid s 1979 candidate thesis which originally was typewritten in russian and manufactured in not so many copies the thesis is devoted to representation theory in the spirit of his thesis advisor b i plotkin representations of semigroups and algebras especially extension to this situation and application of the notion of triangular product of representations for groups introduced by plotkin through representation theory kaljulaid became also interested in automata theory which at a later phase became his main area of interest another field of research concerns combinatorics besides being an outstanding and most dedicated mathematician uno kaljulaid was also very much interested in the history of mathematics in particular he took a vivid interest in the life and work of the great 19th century dorpat tartu algebraist th molien kaljulaid was also very interested in teaching and exposition or popularization of mathematics some of his more popular scientific papers were published in an estonian language journal matemaatika ja kaasaeg mathematics and our age among them there is a whole series of papers about algebraic matters culminating in a brilliant elementary although partly rather philosophical essay devoted to galois theory another such series is his excellent essay of diophantine geometry in various installments followed by his loge to another of his teachers yu i manin it is believed that the inclusion of these papers here will make it more interesting for beginners and perhaps even contribute to attracting young people to mathematics

a previously unrecognized class of a priori indecomposable modules containing all the commonly known indecomposable modules over an artin ring is studied modules in this class are termed modules with cores amalgamating modules with cores other indecomposable modules not necessarily having cores are constructed with a severe restriction on the underlying ring modules with cores are classified in terms of certain iterated amalgamations and when every indecomposable module has a core the underlying rings are also classified

upon publication the first edition of the crcconcise encyclopedia of mathematics received overwhelming accolades for its unparalleled scope readability and utility it soon took its place among the top selling books in the history of chapman hall crc and its popularity continues unabated yet also unabated has been the d
