conventional aircraft today are propelled by the action of propellers or jets and powered by the internal combustion of petroleum fuels in

piston turboprop or jet engines but other power sources powerplants and propulsion devices for airships as well as aircraft have been proposed and even experimented with over the last few centuries the power sources considered include human muscles steam batteries nuclear reactors and hydrogen fuel and the propulsion devices include sails oars flapping wings rockets and cycloidal propellers this meticulously researched book presents the history of these unconventional aerial power and propulsion systems explains the underlying science and technology behind them and assesses the crucial question of practicality

with reference to artefactual archaeological evidence and surviving manuscript documentation of the hydraulis i find that a new dialectical discussion might better analyze and address the underlying understanding of the steam engines longitudinal provenance and therefore requires a redefinition the origins of industrial revolutions themselves from ctesibius to the exploration of mars
