moral psychology is the systematic inquiry into how morality works when it does work and breaks down when it doesn't work in this comprehensive new textbook mark alfano outlines the five central concepts in the study of moral psychology agency patiency sociality temporality and reflexivity subsequent chapters each assess a key area of research which alfano relates both to the five central concepts and to empirical findings he then draws out the philosophical implications of those findings before suggesting future directions for research one of alfano's guiding themes is that moral philosophy without psychological content is empty whereas psychological investigation without philosophical insight is blind he advocates and demonstrates a holistic vision that pictures moral psychology as a project of collaborative inquiry into the

descriptive and normative aspects of the human condition featuring a glossary of technical terms further reading sections and chapter by chapter study questions this rich systematic and accessible introduction to moral psychology will be suitable for both undergraduates and researchers in philosophy psychology and related fields

in most western societies guilt is widely regarded as a vital moral emotion in addition to playing a central role in moral development and progress many take the capacity to feel guilt as a defining feature of morality itself no truly moral person escapes the pang of guilt when she has done something wrong but proponents of guilt s importance face important challenges such as distinguishing healthy from pathological forms of guilt and accounting for the fact that not all cultures value guilt in the same way if at all in this volume philosophers and psychologists come together to think more systematically about the nature and value of guilt the book begins with chapters on the biological origins and psychological nature of guilt and moves on to discuss the

culturally enriched conceptions of guilt and its value that we find in various eastern and western philosophic traditions in addition numerous chapters discuss healthy or morally valuable forms of guilt and their pathological or irrational shadows

philosophers and psychologists have been hard at work trying to unlock the mysteries of our characters unfortunately their answers have been all over the map according to one position every single person has all of the moral virtues such as modesty and compassion although to varying degrees yet according to another position no one has any character traits at all since they are simply illusions and do not exist hence not one person is honest or compassionate or courageous and between these extremes there are plenty of intermediate views christian b miller argues that not one of these leading positions accurately reflects what most of us are like today he explores the implications of the mixed trait framework a theory of moral character developed in his previous book *moral character an empirical theory* mixed traits have both morally positive aspects hence they are not vices along with morally negative aspects hence they are not virtues miller engages with the other leading positions on the empirical nature of character situationism the caps model the big five model and the local trait model he goes on to apply the mixed trait framework to several important topics in ethics especially the development of an error theory about judgments of character and the challenge faced by virtue ethics from the widespread lack of virtue
