in the last few decades civil engineering has undergone substantial technological change which has naturally been reflected in the terminology employed in the industry efforts are now being made in many countries to bring about a systematization and unification of technical terminology in general and that of civil engineering in particular the publication of a multilingual dictionary of civil engineering terms has been necessitated by the expansion of international cooperation and information exchange in this field as well as by the lack of suitable updated bilingual dictionaries this dictionary contains some 14 000 english terms together with their german french dutch and russian equivalents which are used in the main branches of civil engineering and relate to the basic principles of structural design and calculations the elasticity theory strength of materials soil mechanics and other allied technical disciplines to buildings and installations structures and their parts building materials and prefabrications civil engineering technology and practice building and road construction machines construction site equipment housing equipment and fittings including modern systems of air conditioning as well as to hydrotechnical and irrigation constructions the dictionary also includes a limited number of basic technical expressions and terms relating to allied disciplines such as architecture and town planning as well as airfield railway and underground construction the dictionary does not list trade names of building materials parts and machines or the names of chemical compounds nor does it give adverbial adjective or verbal terms

the purpose of this dictionary published jointly by kluwer technische boeken bv deventer the netherlands and russky yazyk publishers moscow ussr is to help the user read and translate english german french dutch and russian texts in electrical engineering up until now all such dictionaries were containing terms pertaining directly to electrical engineering plus the terminology used in its off sheets which have evolved into separate disciplines such as communications electronics automation etc foremost however this dictionary represents the terminology of electrical engineering while the branches are represented by their basic terms only given the relative small volume about 8000 terms the authors tried to reflect the most important terms in such areas as the circuit theory electric and magnetic measurements electric power generation transmission

and distribution as well as the industrial and domestic consumption of electric power the dictionary also contains many terms relevant to high voltage technology electrical machines and apparatus electric drive as well as to the elements and structures of aerial and cable transmission lines in selecting english terms the authors were trying to reflect both their british and ameri can versions although they did not attempt to present all terminological synonyms of this kind in some cases the dictionary provides the main spelling versions
