the voyage of the beagle is charles darwin s account of the momentous voyage which set in motion the current of intellectual events leading to the origin of species

classic of adventure travel and cornerstone in the development of evolutionary theory recounts darwin's five year sojourn in south america where he made the observations that led to his concept of natural selection basing many of his conclusions upon his study of the unique creatures of the galápagos

this volume contains in the form of a journal a history of our voyage and a sketch of those observations in natural history and geology which i think will possess some interest for the general reader i have in this edition largely condensed and corrected some parts and have added a little to others in order to render the volume more fitted for popular reading but i trust that naturalists will remember that they must refer for details to the larger publications which comprise the scientific results of the expedition

darwin s notes from his 1831 trip provide an account of the hms beagle and the first hints of his theory of evolution and natural selection

voyage of the beagle chronicles charles darwin s five years as a naturalist on board the h m s beagle the notes and observations that he recorded in his diary included chile argentina and galapagos islands and encompasses the ecology geology and anthropology of the places he visits a fascinating travel memoir the ideas that were later to evolve into darwin s theory of natural selection find their naissance in voyage of the beagle

the voyage of the beagle by charles darwin as important as the voyage of the beagle is to the information of the genesis of darwin s idea of evolution and of an appreciation of his personal struggle

for self discovery the book's maximum considerable thing is the insight it provides into the Victorian mind. Darwin shared many characteristics with other Victorian intellectuals of his era amongst them Thomas Carlyle, John Stuart Mill, John Henry Newman and Alfred Lord Tennyson. Principally this generation of the 1830s turned into prompted via a conviction of personal future and a sense of being at the beginning of a new era in which the old approaches of viewing subjects would not practice with the exception of Newman they all got here to include a concept of development both spiritual or social. Darwin observed in nature a reason to claim that there was biological progress indeed he furnished Tennyson as an example with metaphoric proof in his idea of herbarian selection of the poet's very own idea of ethical evolution. The voyage of the Beagle displays the mixture of zest for adventure and a sense of challenge that identifies Darwin truly along with his age and era. One of the most salient factors of nature which Darwin confronted with unceasing honesty in particular in the Galápagos islands was that of cruelty. About twenty years after the go back of the Beagle he wrote what a book a devil's chaplain may write on the clumsy wasteful blundering low and horribly merciless works of nature. In an experience it is the other facet of the coin of natural choice if Darwin's idea of evolution pointed to the fashionable development of a species it additionally revealed the indifference of nature to people in the species. It is exactly Darwin's openness to nature that allowed him to understand this duality and it was his clinical honesty which necessitated his acceptance of his remark that supported the final development of his concept. Both of these attributes are already pondered in Darwin's first book the voyage of the Beagle.

The voyage of the Beagle is a title commonly given to the book written by Charles Darwin published in 1839 as his journal and remarks which brought him considerable fame and respect. The title refers to the second survey expedition of the ship HMS Beagle which set sail from Plymouth Sound on 27 December 1831 under the command of Captain Robert Fitzroy while the expedition was originally planned to last two years. It lasted almost five. The Beagle did not return until 2 October 1836. Darwin spent most of this time exploring on land three years and three months on land 18 months at sea.

When HMS Beagle sailed out of Devonport on 27 December 1831 Charles Darwin was twenty-two and setting off on the voyage of a lifetime. His journal here reprinted in a shortened form shows a naturalist making patient observations concerning geology, natural history, people, places and events. Volcanoes in the Galapagos, the Gossamer Spider of Patagonia and the Australasian coral reefs all are to be found in these extraordinary writings. The insights made here were to set in motion the intellectual currents that led to the most controversial book of the Victorian age the origin of species.

Darwin's journal of his voyage around the world in 1831-1836

An account of Darwin's early nineteenth century voyage in the ship Beagle on which he explored the geology and natural history of the areas visited.

Chapter I. Porto Praya, Ribeira Grande. Atmospheric dust with infusoria. Habits of a sea slug and cuttle fish. St Paul's Rocks. Non-volcanic singular incrustations. Insects. The first colonists of islands. Fernando Noronha. Bahia. Burnished rocks. Habits of a diodon. Pelagic confervæ and infusoria. Causes of discoloured sea. St Jago. Cape de Verd islands after having been twice driven back by heavy south-western gales. Her Majesty's ship Beagle, a ten-gun brig under the command of Captain Fitz Roy, R.N. sailed from Devonport on the 27th of December 1831. The object of the expedition was to complete the survey of Patagonia and Tierra del Fuego commenced under Captain King in 1826 to 1830; to survey the shores of Chile, Peru and of some islands in the Pacific; and to carry a chain of chronometrical measurements round the world. On the 6th of January we reached Teneriffe but were prevented landing by fears of our bringing the cholera. The next morning we saw the sun rise behind the rugged outline of the Grand Canary island and suddenly illumine the peak of Teneriffe whilst the lower parts were veiled in fleecy clouds. This was the first of many delightful days never to be forgotten. On the 16th of January 1832 we anchored at Porto Praya in St Jago, the chief island of the Cape de Verd archipelago.

The voyage of the Beagle is the title most commonly given to the book written by Charles Darwin and published in 1839 as his journal and remarks bringing him considerable fame and respect. This was the third volume of the narrative of the voyages of H.M.S. Adventure and Beagle. The other volumes of which were written or edited by the commanders of the ships.
