at first glance roads seem like the simplest possible geotechnical structures however analysis of these structures runs up against complexities related to the intense stresses experienced by road surfaces their intense interaction with climate and the complicated behavior of the materials used in road construction modern mechanistic approaches to road design provide the tools capable of developing new technical solutions however use of these approaches requires deep understanding of the behavior of constituent materials and their interaction with water and heat which has recently been acquired thanks to advances in geotechnical engineering the author comprehensively describes and explains these advances and their use in road engineering in the two volume set geotechnics of roads compiling information that had hitherto only been available in numerous research papers geotechnics of roads advanced analysis and modeling develops 23 extended examples that cover most of the theoretical aspects presented in the book geotechnics of roads fundamentals moreover for most examples volume 2 describes algorithms for solving complex problems and provides matlab scripts for their solution consequently volume 2 is a natural complement of the book geotechnics of roads fundamentals this unique book will be of value to civil structural and geotechnical engineers worldwide

data mining concepts and techniques provides the concepts and techniques in processing gathered data or

information which will be used in various applications specifically it explains data mining and the tools used in discovering knowledge from the collected data this book is referred as the knowledge discovery from data kdd it focuses on the feasibility usefulness effectiveness and scalability of techniques of large data sets after describing data mining this edition explains the methods of knowing preprocessing processing and warehousing data it then presents information about data warehouses online analytical processing olap and data cube technology then the methods involved in mining frequent patterns associations and correlations for large data sets are described the book details the methods for data classification and introduces the concepts and methods for data clustering the remaining chapters discuss the outlier detection and the trends applications and research frontiers in data mining this book is intended for computer science students application developers business professionals and researchers who seek information on data mining presents dozens of algorithms and implementation examples all in pseudo code and suitable for use in real world large scale data mining projects addresses advanced topics such as mining object relational databases spatial databases multimedia databases time series databases text databases the world wide and applications in several fields provides a comprehensive practical look at the concepts and techniques you need to get the most out of your data

this book highlights the latest trends and advances in applications of digital technologies in construction engineering and management a collection of chapters is presented explicating how advanced technological solutions can innovatively address challenges and improve outcomes in the construction industry promising technologies that are highlighted include digital twins virtual reality augmented reality artificial intelligence robotics blockchain and distributed ledger technologies the first section presents recent applications of extended reality technologies for construction education and advanced project control the subsequent chapters explore artificial intelligence ai blockchain and bim enabled digitalization in construction through a series of case studies reviews and technical studies innovative technologies and digitalized solutions are proposed for improved design planning training monitoring inspection and operations management in architectural engineering and construction aec contexts in addition to the technological perspectives and insights presented pressing issues such as decarbonization safety and sustainability in the built environment

are also discussed this book provides foundational knowledge and in depth technical studies on emerging technologies for students academics and industry practitioners the research demonstrates how the effective use of new technologies can enhance work methods transform organizational structures and bring profound advantages to construction project participants

this book develops fresh ideas on harmony through analyzing the music of one of western music s true innovators franz schubert

this book provides a comprehensive overview of the role of computers and computational tools at different stages of drug discovery and development designed to meet the needs of a beginner to advanced learner the book provides the information on the tools how they work with the latest reports on applications in drug design drug delivery and building network pharmacology models part i explores the pharmacological aspects covering computational simulation of drug delivery at the molecular level modeling for formulation design and the revolutionary use of computational fluid dynamics in pharmaceutical processes specific applications such as pharmaceutical die filling processes inhalation aerosol based targeted drug delivery and the development of inhalation compounds using in silico modeling tools are discussed the use of computational tools in cheminformatics and their application in preformulation perspectives for drug delivery are also included part ii expands the scope to include solubility prediction absorption prediction protein binding prediction bio permeability prediction toxicity prediction and metabolism prediction it covers the identification of potential sites of metabolism in lead molecules and computer assisted simulation studies to understand drug polymer interactions recent advances in drug likeness screening using software and online tools are also reviewed part

iii focuses on specific therapeutic areas the chapters examine the mechanistic understanding of anti alzheimer s agents the design of novel antidiabetic agents and the exploration of drug design for atherosclerosis it also covers modern computational intelligence based drug repurposing for cancer therapeutics computational analyses of the mechanism of action of antiepileptic agents and rational approaches for designing antihypertensive agents the final chapters explore drug discovery and computational strategies in the context of multi drug resistant tuberculosis and the network pharmacology approach to uncover the pharmacological mechanisms of natural products the book will be a useful reference for researchers students and professionals in the field of life sciences chemistry pharmaceutics and bioinformatics

the third edition of interdisciplinary research process and theory offers a comprehensive and systematic presentation of the interdisciplinary research process and the theory that informs it authors allen f repko and rick szostak illustrate each step of the decision making process by drawing on student and professional work from the natural sciences social sciences humanities and applied fields designed for active learning and problem based approaches as well as for more traditional approaches the book now includes more examples from real student research projects and adds more tables and figures to enliven the discussion
