this encyclopedia is composed of an eight volume set that provides an overview of the field of environmental analysis the contents are divided into major content areas including air pollution control environmental law and environmental sampling the volumes are organized alphabetically with each article signed by the author s the individual articles begin with a summary of the topic heading and then divide the text into subtopics indicated by boldface headings the articles are written clearly however the authors assume a basic knowledge of chemistry and math on the part of the reader for example the acid mine drainage article refers to the arrhenius equation but does not clarify this statement in the text each article contains graphs as well as pictures to illustrate points made in the text the articles are long and provide a detailed explanation of each topic the authors also provide a bibliography at the end of each article special features of the encyclopedia include a list of contributors a table of conversion factors and a list of abbreviations and acronyms the preface outlines the general contents of the encyclopedia the preface also includes sections that suggest the target audience and recommended usages for the set the final volume of the set contains an alphabetic index to the topics contained in the volumes

composite materials are increasingly used in many applications because they offer the engineer a range of advantages over traditional materials they are often used in situations where a specified level of performance is required but where the cost of testing the materials under the extremes of those specifications is very high in order to solve this problem engineers are turning to computer modelling to evaluate the materials under the range of conditions they are likely to encounter many of these analyses

are carried out in isolation and yet the evaluation of a range of composites can be carried out using the same basic principles in this new book the editor has brought together an international panel of authors each of whom is working on the analysis and modelling of composite materials the overage of the book is deliberately wide to illustrate that similar principles and methods can be used to model and evaluate a wide range of materials it is also hoped that by bringing together this range of topics the insight gained in the study of one composite can be recognized and utilized in the study of others professional engineers involved in the specification and testing of composite material structures will find this book an invaluable resource in the course of their work it will also be of interest to those industrial and academic engineers involved in the design development manufacture and applications of composite materials
