concurrent engineering (CE) is based on the premise that different phases of a product's lifecycle should be conducted concurrently and initiated as early as possible within the product creation process (PCP). It has become the substantive basic methodology in many industries including automotive, aerospace, machinery, shipbuilding, consumer goods, process industry, and environmental engineering. CE aims to increase the efficiency of the PCP and reduce errors in later phases while incorporating considerations for full lifecycle and through-life operations. This book presents the proceedings of the 22nd ISPE International Society for Productivity Enhancement International Conference on Concurrent Engineering (CE) 2015, entitled "Transdisciplinary Lifecycle Analysis of Systems," held in Delft, the Netherlands, in July 2015. It is the second in the series "Advances in Transdisciplinary Engineering." The book includes 63 peer-reviewed papers and 2 keynote speeches arranged in 10 sections: Keynote Speeches, Systems Engineering, Customization and Variability Management, Production-oriented Design, Maintenance and Repair Design, Methods and Knowledge-based Engineering, Multidisciplinary Product Management, Sustainable Product Development, Service-oriented Design, Product Lifecycle Management, and Trends in CE. Containing papers ranging from the theoretical and conceptual to the highly pragmatic, this book will be of interest to all engineering professionals and practitioners, researchers, designers, and educators.

The question of the authority of international law over domestic authorities and the duties of state officials to international law are fundamental concerns in international legal theory and practice. The authority of international law, obedience, respect, and rebuttal addresses these concerns by reframing the present accounts of authority in international law, construing its authority as imposing three different layers of duties on domestic officials: the duty to obey, the duty to respect, and the duty to rebut. The book provides an original interpretation of this authority, one that is not tied to prior state consent or domestic constitutional frameworks. It offers a nuanced account arguing that whether or not international law is obeyed within any given situation depends on the type of duty it imposes on the state and that duty's normative force. There is no strict framework in which international law always trumps domestic law or vice versa. Instead, Cali presents a realistic account of when international law has absolute authority and when it can afford a margin of appreciation to states. The authority of international law contributes to existing debates by considering the gap between consent-based jurisprudential theories of authority and self-interest and identity-based theories of compliance, and by considering monism, dualism, and normative pluralism as theories for addressing authority competition between domestic legal orders and international law.
