the sage handbook of the 21st century city focuses on the dynamics and disruptions of the contemporary city in relation to capricious processes of global urbanisation mutation and resistance an international range of scholars

engage with emerging urban conditions and inequalities in experimental ways speaking to new ideas of what constitutes the urban highlighting empirical explorations and expanding on contributions to policy and design the handbook is organised around nine key themes through which familiar analytic categories of race gender and class as well as binaries such as the urban rural are readdressed these thematic sections together capture the volatile processes and intricacies of urbanisation that reveal the turbulent nature of our early twenty first century hierarchy elites and evictions productivity over investment and abandonment authority governance and mobilisations volatility disruption and adaptation conflict vulnerability and insurgency provisionality infrastructure and incrementalism mobility re bordering and de bordering civility contestation and encounter design speculation and imagination this is a provocative inter disciplinary handbook for all academics and researchers interested in contemporary urban studies

urban transport systems worldwide are faced by a multitude of challenges among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world the prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner however a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure planning and design for sustainable urban mobility argues that the development of sustainable urban transport systems requires a conceptual leap the purpose of transportation and mobility is to gain access to destinations activities services and goods thus access is the ultimate objective of transportation as a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning this new report of the united nations human settlements programme *un habitat the world's leading authority on urban issues* provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems the global report on human settlements is the most authoritative and up to date global assessment of human settlements conditions and trends preceding issues of the report have addressed such topics as cities in a globalizing world the challenge of slums financing urban shelter enhancing urban safety and security planning sustainable cities and cities and climate change

this report examines the possibilities of vulnerability reduction through long

term changes in urban form and structure in the light of projected trends in economic and social forces affecting future urban development urban decentralization is likely to continue in the future and technological change may permit deliberate acceleration of this trend toward sprawling urban regions various conceptual and empirical urban forms are reducible to a few basic types the vulnerability characteristics of the different forms are mixed but the galaxy and dispersed sheet forms are generally best suited to civil defense purposes these are similar to the forms that future urban regions are expected to take a variant of the dispersed sheet form is considered the most advantageous it would provide compact urban communities separated by extensive open spaces devoted to nonurban land uses within future metropolitan areas in addition efforts to increase the hardness of urban structures are desirable an increased proportion of high hardness structural types should be encouraged in the building mix this increase should take the form mainly of high hardness residential structures dispersed singly or in clusters throughout residential areas indirect methods are considered by which progress toward these objectives might be assisted through various on going federal and state governmental activities author
