in recent years the field of universal access has made significant progress in consolidating theoretical approaches scientific methods and technologies as well as in exploring new application domains increasingly professionals in this rapidly maturing area require a comprehensive and multidisciplinary resource that addresses current principles

interpreting motion presents an integrated perspective on how language structures constrain concepts of motion and how the world

shapes the way motion is linguistically expressed natural language allows for efficient communication of elaborate descriptions of movement without requiring a precise specification of the motion interpreting motion is the first book to analyze the semantics of motion expressions in terms of the formalisms of qualitative spatial reasoning it shows how motion descriptions in language are mapped to trajectories of moving entities based on qualitative spatio temporal relationships the authors provide an extensive discussion of prior research on spatial prepositions and motion verbs devoting chapters to the compositional semantics of motion sentences the formal representations needed for computers to reason qualitatively about time space and motion and the methodology for annotating corpora with linguistic information in order to train computer programs to reproduce the annotation the applications they illustrate include route navigation the mapping of travel narratives question answering image and video tagging and graphical rendering of scenes from textual descriptions the book is written accessibly for a broad scientific audience of linguists cognitive scientists computer scientists and those working in fields such as artificial intelligence and geographic information systems

this book constitutes the proceedings of the 11th international conference on spatial information theory cosit 2013 held in scarborough uk in september 2013 the 28 papers presented in this book were carefully reviewed and selected from 62 full paper submissions the following topics are addressed spatial change wayfinding and assistance representing spatial data handling language data spatial language and computation spatial ontology spatial reasoning and representation

step by step instructions and hundreds of illustrations walk readers through the toughest upgrades and repairs with 650 pages of user friendly information a troubleshooting section features questions most computer tech support people encounter

clemens holzmann investigates the role of spatial contexts for autonomous embedded systems the author presents concepts for recognizing representing and reasoning about qualitative spatial relations and their changes over time as well as an appropriate architecture which has prototypically been implemented in a flexible software framework his results show that the proposed concepts are suitable for developing spatially aware applications and that qualitatively abstracted relations can constitute an adequate basis for this purpose

brunobuchberger this book is a synopsis of basic and applied research done at the various research institutions of the softwarepark

hagenberg in austria starting with 15 coworkers in my research institute for symbolic computation risc i initiated the softwarepark hagenberg in 1987 on request of the upper australian government with the objective of creating a scientific technological and economic impulse for the region and the international community in the meantime in a joint effort the softwarepark hagenberg has grown to the current 2009 size of over 1000 r&d employees and 1300 students in six research institutions 40 companies and 20 academic study programs on the bachelor master's and phd level the goal of the softwarepark hagenberg is innovation of economy in one of the most important current technologies software it is the message of this book that this can only be achieved and guaranteed long term by watering the root namely emphasis on research both basic and applied in this book we summarize what has been achieved in terms of research in the various research institutions in the softwarepark hagenberg and what research vision we have for the imminent future when i founded the softwarepark hagenberg in addition to the watering the root principle i had the vision that such a technology park can only prosper if we realize the magic triangle i.e. the close interaction of research academic education and business applications at one site see figure 1

what is space is there space when there are objects to occupy it or is there space only when there are no objects to occupy it can there be space without objects these are old philosophical questions that concern the ontology of space in the philosophical sense of ontology what is the nature of space cognitive science in general and artificial intelligence in particular are less concerned with the nature of things than with their mental conceptualizations in spatial cognition research we address questions like what do we know about space how is space represented what are the representational entities what are the representational structures answers to these questions are described in what is called ontologies in artificial intelligence different tasks require different knowledge and different representations of knowledge facilitate different ways of solving problems in this book jan oliver wallgrün develops and investigates representational structures to support tasks of autonomous mobile robots from the acquisition of knowledge to the use of this knowledge for navigation the research presented is concerned with the robot mapping problem the problem of building a spatial representation of an environment that is perceived by sensors that only provide incomplete and uncertain information this information usually needs to be related to other imprecise or uncertain information the routes a robot can take can be abstractly described in terms of graphs where alternative routes are represented by alternative branches in these route graphs

this book constitutes the refereed proceedings of the international conference on spatial cognition spatial cognition 2006 it covers

spatial reasoning human robot interaction visuo spatial reasoning and spatial dynamics spatial concepts human memory mental reasoning and assistance spatial concepts human memory and mental reasoning navigation wayfinding and route instructions as well as linguistic and social issues in spatial knowledge processing
