background it has been proved that bystander cardiopulmonary resuscitation cpr saves lives however which training method in cpr is most instructive and whether survival is affected by the training level of the bystander have not yet been fully described aim to identify the factors that may affect 7th grade students acquisition of cpr skills during cpr training and their willingness to act and to describe 30 day survival from outof hospital cardiac arrest ohca after bystander cpr and the actions performed by laymen versus off duty medically educated personnel methods studies i iii investigate a cpr training intervention given to students in 7th grade during 2013 2014 the classes were randomized to the main intervention the mobile phone application app or dvd based training some of the classes were randomized to one or several additional interventions a practical test with feedback reflection a web course a visit from elite athletes and automated external defibrillator aed training the students practical skills willingness to act and knowledge of stroke symptoms symptoms of acute myocardial infarction ami and lifestyle factors were assessed directly after training and at 6 months using the laerdal pc skillreporting system and entered into a modified version of the cardiff test scoring sheet and a questionnaire the cardiff test resulted in a total score of 12 48 points and the questionnaire resulted in a total score of 0 7 points for stroke symptoms 0 9 points for symptoms of ami and 0 6 points on lifestyle factors study iv is based on retrospective data from the national quality register the swedish registry of cardiopulmonary resuscitation 2010 2014 results a total of 1339 students were included in the cpr training intervention the dvd based group was superior to the app based group in cpr skills with a total score of 35 sd 4 0 vs 33 sd 4 2 points directly after training p 0 001 and 33 sd 4 0 vs 31 sd 4 2 points at six months p 0 001 of the additional interventions the practical test with feedback had the greatest influence regarding practical skills at six months the intervention group scored 32 sd 3 9 points and the control group cpr only scored 30 sd 4 0 points p 0 001 reflection the web course visits from elite athletes and aed training did not further increase the students acquisition of practical cpr skills the students who completed the web course help brain heart received a higher total score for theoretical knowledge in comparison with the control group directly after training stroke 3 8 sd 1 8 vs 2 7 sd 2 0 points p 0 001 ami 4 0 sd 2 0 vs 2 5 sd 2 0 points p 0 001 lifestyle factors 5 4 sd 1 2 vs 4 5 sd 2 0 points p 0 001 most of the students 77 at 6 months regardless of the intervention applied expressed that they would perform both chest compressions and ventilations in a cardiac arrest ca situation involving a relative if a stranger had ca a significantly lower proportion of students 32 p 0 001 would perform both compressions and ventilations in this case however many would perform compressions only in most cases of bystander witnessed ohca cpr was performed by laymen off duty health care personnel bystanders initiated cpr within 1 minute vs 2 minutes for laymen p 0 0001 thirty day survival was 14 7 among patients who received cpr from laymen

and 17.2% among patients who received bystander CPR from off-duty health care personnel. Conclusions: The DVD-based method was superior to the app-based method in terms of teaching practical CPR skills to 7th grade students. Of the additional interventions, a practical test with feedback was the most efficient intervention to increase learning outcome. The additional interventions, reflection, web course visit from elite athletes, and AED did not increase CPR skills further. However, the web course help brain heart improved the students' acquisition of theoretical knowledge regarding stroke, AMI, and lifestyle factors. For OHCA, off-duty health care personnel bystanders initiated CPR earlier, and 30-day survival was higher compared with laymen bystanders.

The scientific community at the global level is fast becoming aware of the rising use of open source tools such as R and Python for data analysis. Unfortunately, in spite of the awareness, the conversion of the intrigue to the practical knowledge in utilization of the open source tools for routine day-to-day data analysis is seriously lacking both among physicians and medical scientists. This book enables physician scientists to understand the complexity of explaining a programming data analytic language to a healthcare professional and medical scientist. It simplifies and explains how R can be used in medical projects and routine office works. It also talks about the methodologies to convert the knowledge to practice. The book starts with the introduction to the structure of R programming language in the initial chapters, followed with explanations of utilizing R in the basics of data analysis like data importing and exporting, operations on a data frame, parametric and non-parametric tests, regression, sample size calculation, survival analysis, receiver operator characteristic analysis, ROC, and techniques of randomization. Each chapter provides a brief introduction to the involved statistics, for example, dataset, working codes, and a section explaining the codes. In addition to it, a chapter has been dedicated to describing the ways to generate plots using R. This book primarily targets healthcare professionals and medical life science researchers in general.
