soil classification and terminology are fundamental issues for the clear understanding and communication of the subject however while there are many national soil classification systems these do not directly correlate with each other this leads to confusion and great difficulty in undertaking comparative scientific research that draws on more than one system and in making sense of international scientific papers using a system that is unfamiliar to the reader this book aims to clarify this position by describing and comparing different systems and evaluating them in the context of the world reference base wrb for soil resources the latter was set up to resolve these problems by creating an international umbrella system for soil correlation all soil scientists should then classify soils using the wrb as well as their national systems the book is a definitive and essential reference work for all students studying soils as part of life earth or environmental sciences as well as professional soil scientists published with international union of soil sciences

modern recording techniques such as multi electrode arrays and 2 photon imaging are capable of simultaneously monitoring the activity of large neuronal ensembles at single cell resolution this makes it possible to study the dynamics of neural populations of considerable size and to gain insights into their computations and functional

organization the key challenge with multi electrode recordings is their high dimensional nature understanding this kind of data requires powerful statistical techniques for capturing the structure of the neural population responses and their relation with external stimuli or behavioral observations contributions to this research topic should advance statistical modeling of neural populations questions of particular interest include 1 what classes of statistical methods are most useful for modeling population activity 2 what are the main limitations of current approaches and what can be done to overcome them 3 how can statistical methods be used to empirically test existing models of probabilistic population coding 4 what role can statistical methods play in formulating novel hypotheses about the principles of information processing in neural populations this research topic is connected to a one day workshop at the computational neuroscience meeting 2009 in berlin cnsorg.org/2009/workshops.shtml and kyb.tuebingen.mpg.de/bethge/workshops/cns2009
