this book constitutes the thoroughly refereed post proceedings of the 15th international workshop on languages and compilers for parallel processing lcpc 2002 held in college park md usa in july 2002 the 26 revised full papers presented were carefully selected during two rounds of reviewing and improvement from 32 submissions all current issues in parallel processing are addressed in particular memory constrained computation compiler optimization performance studies high level languages programming language consistency models dynamic parallelization parallelization of data mining algorithms parallelizing compilers garbage collection algorithms and evaluation of iterative compilation

this book constitutes the thoroughly refereed post conference proceedings of the 21th international workshop on languages and compilers for parallel computing lcpc 2008 held in edmonton canada in july august 2008 the 18 revised full papers and 6 revised short papers presented were carefully reviewed and selected from 35 submissions the papers address all aspects of languages compiler techniques run time environments and compiler related performance evaluation for parallel and high

performance computing and comprise also presentations on program analysis that are precursors of high performance in parallel environments

while compilers for high level programming languages are large complex software systems they have particular characteristics that differentiate them from other software systems their functionality is almost completely well defined ideally there exist complete precise descriptions of the source and target languages additional descriptions of the interfaces to the operating system programming system and programming environment and to other compilers and libraries are often available the book deals with the optimization phase of compilers in this phase programs are transformed in order to increase their efficiency to preserve the semantics of the programs in these transformations the compiler has to meet the associated applicability conditions these are checked using static analysis of the programs in this book the authors systematically describe the analysis and transformation of imperative and functional programs in addition to a detailed description of important efficiency improving transformations the book offers a concise introduction to the necessary concepts and methods namely to operational semantics lattices and fixed point algorithms this book is intended for students of computer science the book is supported throughout with examples exercises and program fragments

etaps 2002 was the fth instance of the european joint conferences on theory and practice of software etaps is an annual federated conference that was established in 1998by combining a number of existing and new conferences this year it comprised 5 conferences fossacs fase esop cc tacas 13 satellite workshops acl2 agt cmcs cocv dcc int ldta sc sfedl slap spin tpts and viss 8invited lectures not including those speci c to the satellite events and several tutorials the events that comprise etaps address various aspects of the system velopment process including speci cation design implementation analysis and improvement the languages methodologies and tools which support these tivities are all well within its scope di erent blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

the widespread use of object oriented languages and internet security concerns are just the beginning add embedded systems multiple memory banks highly pipelined units operating in parallel and a host of other advances and it becomes clear that current and future computer architectures pose immense challenges to compiler designers challenges th

software programming languages
