su muerte fue el principio de su vida este relato tiene las claves que revelan la veracidad de un mensaje enviado desde los orígenes de la civilización la humanidad ha heredado unas creencias con las cuales se han formado unos paradigmas que son como altísimos muros aparentemente invencibles está en usted conocer el mensaje a través de este relato inspirado en el que se unen las vidas humanas con lo trascendental lo cual es y será siempre inalterable el mensaje le revelará quién es usted en realidad

the issues of mental causation consciousness and free will have vexed philosophers since plato this book examines these unresolved issues from a neuroscientific perspective in contrast with philosophers who use logic rather than data to argue whether mental causation or consciousness can exist given unproven first assumptions tse proposes that we instead listen to what neurons have to say because the brain must already embody a solution to the mind body problem why not focus on how the brain actually realizes mental causation tse draws on exciting recent neuroscientific data concerning how informational causation is realized in physical causation at the level of nmda receptors synapses dendrites neurons and neuronal circuits he argues that a particular kind of strong free will and downward mental causation are realized in rapid synaptic plasticity recent neurophysiological breakthroughs reveal that neurons function as criterial assessors of their inputs which then change the criteria that will make other neurons fire in the future

such informational causation cannot change the physical basis of information realized in the present but it can change the physical basis of information that may be realized in the immediate future this gets around the standard argument against free will centered on the impossibility of self causation tse explores the ways that mental causation and qualia might be realized in this kind of neuronal and associated information processing architecture and considers the psychological and philosophical implications of having such an architecture realized in our brains

this book presents thought provoking and pioneering insights into key issues surrounding the mental health of children and adolescents its focus on this age group underscores the critical need to recognize and address signs and symptoms of mental distress during this pivotal and impressionable stage of life

in this book i expound and suggest a space for reflection and a thorough analysis which places its greatest emphasis on a detailed review and examination about the knowledge early childhood educators should have regarding the concepts that define the functioning of the human brain as a fundamental organ in students lives on the whole it involves discovering how we learn in which ways emotions influence the learning process and why it is necessary to create enriched environments for teaching learning based on contextualized projects the purpose is to discover the motivation which will enhance skills and competences in young learners
