global health lecture notes issues challenges and global action provides a thorough introduction to a wide range of important global health issues and explores the resources and skills needed for this rapidly expanding area. Global health is a growing area that reflects the increasing interconnectedness of health and its determinants. Major socio-economic, environmental, and technological changes have produced new challenges and exacerbated existing health inequalities experienced in both developed and developing countries. This textbook focuses on managing and preventing these challenges as well as analysing critical links between health, disease, and socio-economic development through a multi-disciplinary approach featuring learning objectives and discussion points. Global health lecture notes is an indispensable resource for global health students, faculty, and practitioners who are looking to build on their understanding of global health issues.

Scientific study from the year 2008 in the subject environmental sciences grade B language English abstract: Health, environment, and poverty are closely interrelated and inseparable, particularly in developing countries. WHO estimates that environmental factors are the root cause of 25% of the total burden of disease worldwide and account for about 35% in sub-Saharan Africa. Effective environmental management is the key to avoiding a quarter of all preventable illnesses which are directly caused by environmental factors. In the Bibiani Bekwai and Sefwi Wiawso districts of the western region of Ghana, the environment has been altered by complex human-induced factors which have negatively impacted on the health of the population. This paper seeks to establish the major causes of environmental and human health degradation and whether there is a direct link between environmental degradation and human health in Bibiani Bekwai and the Sefwi Wiawso districts in the western region of Ghana. Four complementary approaches were used during the investigation: extensive literature review, consultations with key informants, the administration of questionnaires, and stakeholder consultations. The data was analyzed using SPSS to establish the linkages between environmental deterioration and human health in the two districts. The results clearly suggest that environmental degradation seriously affects human health in the two districts. 80% of the ailments in Bibiani Bekwai and Sefwi Wiawso districts are attributable to poor environmental health and sanitation and lack of access to good drinking water. Never in the history of mankind has greater attention been given to environment and health. Agbemang et al. (2007) it is estimated that 80
