satya prakash s modern inorganic chemistry is a treatise on the chemistry of elements on the basis of latest theories of chemistry initial chapters are devoted to the study of fundamentals of chemistry such as structure of atom periodic classification of elements chemical bonding and radioactivity to name a few it further graduates to complex discussions not only on extraction properties and uses of the elements but also on preparation properties uses and structure of their important compounds chemistry of elements and their compounds have been explained on the basis of their position in the long form of periodic table and their electronic configurations structures special emphasis has been put on the discussion of the correlation between the structure and properties of elements compound the book caters to the requirements of bachelor in science pass courses with detailed discussion on several advanced topics the students of bachelor in science honours and masters in science would also find it extremely useful

after more than a century of study the hydrogen atom still presents challenges and opportunities to theoretical as well as to experimental physicists the discovery of the lamb shift in the late nineteen forties followed by the development of qed and the introduction of powerful new experimental techniques in the nineteen sixties and seventies have preserved for hydrogen its central place in atomic physics part i of this book a reprint of the work published in 1957 covers the period from the earliest days up to the late nineteen fifties part ii a collection of progress reports written by well known specialists on hydrogen and hydrogen like systems presents the advances in theory and experiment that have occurred since that time

the book is about multidisciplinary science education the challenges of our time

such as improving the length and quality of lives on earth and short and long distance communication and transportation in this book we provide readers with the multidisciplinary education necessary to meet the scientific and technological challenges of our time while optimizing the college experience for students the fundamental notions addressed in this book include gravitational forces and energy dark matter and dark energy heat transfer in solid earth stars interiors and human bodies electromagnetic radiation and spectroscopy quantum entanglement and computing accretion disks matter in plasma state and exoplanets we illustrate the importance of these notions with applications across disciplines including monitoring the deformation of the solid earth's surface using satellite measurements unusual gravity anomalies in antarctica a view and characterization of the far side of our moon earth's climate titan's anti greenhouse effect long distance communication between earth and the planets and exoplanets etc finally the book contains analytical and computational problems including matlab software developed especially for the classes associated with this book key features contains multiple analytic and computational matlab exercises explores applications related to space programs discoveries provides an accessible introduction and response to growing multidisciplinary science programs
