Branch Pruning

This involves removing larger branches, often with pruning shears or 2 specialized bonsai tools. It's a more drastic technique used to shape the overall structure of the bonsai, removing competing branches or those that detract from the desired aesthetic. This should be done carefully and strategically to avoid damaging the tree.

Expert Tip: Always use clean, sharp pruning shears to minimize damage and prevent the spread of disease. Sterilizing your tools with rubbing alcohol between cuts is a crucial hygiene practice.

2 Wiring: Shaping the Branches with Finesse

Wiring is another fundamental technique employed to shape and style bonsai branches. Aluminum or copper wire is carefully wrapped around branches to guide their growth into the desired position.

Wire Selection

Choose the appropriate gauge of wire based on the thickness of the branch. Too thin a wire can snap, while too thick a wire can damage the bark.

Wiring Technique

Wire should be applied smoothly and evenly, avoiding kinks and tight wraps that can girdle the branch, constricting the flow of sap. Remove the wire once the branch has set in its new position to avoid damage.

Branch Positioning

Consider the natural flow and movement of branches when wiring. Aim for graceful curves and avoid unnatural angles.

Realworld Example: The classic cascade style of bonsai relies heavily on wiring to dramatically curve the main trunk and branches downwards, creating a waterfall effect.

The bonsai pot is not merely a container; it's an integral part of the overall aesthetic. Choosing the right pot and potting mix is critical for the tree's health and longevity.

Pot Selection

Potting Mix
