how tech companies like google airbnb stubhub and facebook learn from experiments in our data driven world an excellent primer on experimental and behavioral economics have you logged into facebook recently searched for something on google chosen a movie on netflix if so you ve probably been an unwitting participant in a variety of experiments also known as randomized controlled trials designed to test the impact of different online experiences once an esoteric tool for academic research the randomized controlled trial has gone mainstream no tech company worth its salt or its share price would dare make major changes to its platform without first running experiments to understand how they would influence user behavior in this book michael luca and max bazerman explain the importance of experiments for decision making in a data driven world luca and bazerman describe the central role experiments play in the tech sector drawing lessons and best practices from the experiences of such companies as stubhub alibaba and uber successful experiments can save companies money ebay for example discovered how to cut 50 million from its yearly advertising budget or bring to light something previously ignored as when airbnb was forced to confront rampant discrimination by its hosts moving beyond tech luca and bazerman consider experimenting for the social good different ways that governments are using experiments to influence or nudge behavior ranging from voter apathy to school absenteeism experiments they argue are part of any leader s toolkit with this book readers can become part of the experimental revolution

the tools and technique used in the design of experiments doe have been proved successful in meeting the challenge of continuous improvement over the last 15 years however research has shown that applications of these techniques in small and medium sized manufacturing companies are limited due to a lack of statistical knowledge required for their effective implementation although many books have been written in this subject they are mainly by statisticians for statisticians and

not appropriate for engineers design of experiments for engineers and scientists overcomes the problem of statistics by taking a unique approach using graphical tools the same outcomes and conclusions are reached as by those using statistical methods and readers will find the concepts in this book both familiar and easy to understand the book treats planning communication engineering teamwork and statistical skills in separate chapters and then combines these skills through the use of many industrial case studies design of experiments forms part of the suite of tools used in six sigma key features provides essential doe techniques for process improvement initiatives introduces simple graphical techniques as an alternative to advanced statistical methods reducing time taken to design and develop prototypes reducing time to reach the market case studies place doe techniques in the context of different industry sectors an excellent resource for the six sigma training program this book will be useful to engineers and scientists from all disciplines tackling all kinds of manufacturing product and process quality problems and will be an ideal resource for students of this topic dr jiju anthony is senior teaching fellow at the international manufacturing unit at warwick university he is also a trainer and consultant in doe and has worked as such for a number of companies including motorola vickers procter and gamble nokia bosch and a large number of smes provides essential doe techniques for process improvement initiatives introduces simple graphical techniques as an alternative to advanced statistical methods reducing time taken to design and conduct tests case studies place doe techniques in the context of different industry sectors

this book volume provides complete and updated information on the applications of design of experiments doe and related multivariate techniques at various stages of pharmaceutical product development it discusses the applications of experimental designs that shall include oral topical transdermal injectables preparations and beyond for nanopharmaceutical product development leading to dedicated case studies on various pharmaceutical experiments through illustrations art works tables and figures this book is a valuable guide for all academic and industrial researchers pharmaceutical and biomedical scientists undergraduate and postgraduate research scholars pharmacists biostatisticians biotechnologists formulations and process engineers regulatory affairs and quality assurance personnel

experiment is widely regarded as the most distinctive feature of natural science and essential to the way scientists find out

about the world yet there has been little study of the way scientists actually make and use experiments the uses of experiment fills this gap in our knowledge about how science is practised presenting 14 original case studies of important and often famous experiments the book asks the questions what tools do experimenters use how do scientists argue from experiments what happens when an experiment is challenged how do scientists check that their experiments are working are there differences between experiments in the physical sciences and technology leading scholars in the fields of history sociology and philosophy of science consider topics such as the interaction of experiment instruments and theory accuracy and reliability as hallmarks of experiment in science and technology realising new phenomena the believability of experiments and the sort of knowledge they produce and the wider contexts on which experimentalists draw to develop and win support for their work drawing on examples as diverse as galilean mechanics victorian experiments on electricity experiments on cloud formation and testing of nuclear missiles a new view of experiment emerges this view emphasises that experiments always involve choice tactics and strategy in persuading audiences that nature resembles the picture experimenters create

francis bacon introduced his contemporaries to a new way of investigating nature he called it natural and experimental history despite its rather traditional name bacon s natural and experimental history was a new discipline it comprised new ideas new practices and new models of collaborative research this new discipline was in many ways a surprisingly successful project it provided early modern naturalists with tools methods and models for both investigating nature and writing about their subject it also offered a set of norms and values for guiding research and yet this new discipline was not a science of nature it was more like an art this book aims to trace the emergence evolution and reception of francis bacon s art of experimental natural history
