nineteenth century landscape architect frederick law olmsted described his most famous project the design of new york s central park as a democratic development of highest significance over the years the significance of green in civic life has grown in twenty first century america not only open space but also other issues of sustainability such as

potable water and carbon footprints have become crucial elements in the quality of life in the city and surrounding environment confronted by a u s population that is more than 70 percent urban growing concern about global warming rising energy prices and unabated globalization today s decision makers must find ways to bring urban life into balance with the earth in order to sustain the natural economic and political environment of the modern city in growing greener cities a collection of essays on urban sustainability and environmental issues edited by eugenie l birch and susan m wachter scholars and practitioners alike promote activities that recognize and conserve nature s ability to sustain urban life these essays demonstrate how partnerships across professional organizations businesses advocacy groups governments and individuals themselves can bring green solutions to cities from london to seattle beyond park and recreational spaces initiatives that fall under the green umbrella range from public transit and infrastructure improvement to aquifer protection and urban agriculture growing greener cities offers an overview of the urban green movement case studies in effective policy implementation and tools for measuring and managing success thoroughly illustrated with color graphs maps and photographs growing greener cities provides a panoramic view of urban sustainability and environmental issues for green minded city planners policy makers and citizens

this title includes a number of open access chapters two trends come together in the world s cities to make urban sustainability a critical issue today first greater and greater numbers of people are living in urban areas and are projected to do so for the foreseeable future additionally cities contribute to climate change in a significant way and must make systemic changes to mitigate and adapt to climate change effects urban planners face serious challenges in enhancing sustainability but also have an important set of tools available for creating innovative solutions this book adds to the conversation about the place of urban planning in the creation and maintenance of sustainable cities

containing the proceedings of the 9th international conference on urban regeneration and sustainability this book addresses the multi disciplinary aspects of urban planning a result of the increasing size of cities the amount of resources and services required and the complexity of modern society most of earth s population now lives in cities and the process of urbanisation still continues generating many problems deriving from the drift of the population towards them these problems can be resolved by cities becoming efficient habitats saving resources in a way that improves the quality and standard of living the process however faces a number of major challenges related to reducing pollution

improving main transportation and infrastructure systems new urban solutions are required to optimise the use of space and energy resources leading to improvements in the environment i.e. reduction in air water and soil pollution as well as efficient ways to deal with waste generation these challenges contribute to the development of social and economic imbalances and require the development of new solutions large cities are probably the most complex mechanisms to manage however despite such complexity they represent a fertile ground for architects engineers city planners social and political scientists and other professionals able to conceive new ideas and time them according to technological advances and human requirements the challenge of planning sustainable cities lies in considering their dynamics the exchange of energy and matter and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems topics covered include urban strategies planning development and management urban conservation and regeneration the community and the city eco town planning landscape planning and design environmental management sustainable energy and the city transportation quality of life waterfront development case studies architectural issues cultural heritage issues intelligent environment and emerging technologies planning for risk disaster and emergency response safety and security waste management infrastructure and society urban metabolism

the concept of sustainable urban development has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the anthropocene climate change has emerged to be one of the biggest challenges faced by our planet today threatening both built and natural systems with long term consequences which may be irreversible while there is a vast body of literature on sustainability and sustainable urban development there is currently limited focus on how to cohesively bring together the vital issues of the planning development and management of sustainable cities moreover it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation but also to the generations beyond the current global school strikes for climate action known as fridays for future evidences this the book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide this book fills a gap in the literature by bringing together issues related to the planning development and management of cities and focusing on a triple bottom line approach to sustainability

cities in transition focuses on the sustainability transitions initiated in 40 European cities. The book presents the incredible wealth of insights gathered through hundreds of interviews and questionnaires. Four key domains: local energy systems, local green spaces, local water systems, and local labour markets have been the focus of the field research. Investigating local potentials for social innovation and new forms of civil society self-organisation, examining the potential of new organizational frameworks like co-operatives, multi-stakeholder constructions, local regional partnerships, and networks for the success of such transitions, this book presents the key ingredients of a sustainable urban community as a viable concept to address current global financial, environmental, and social challenges. Crucial reading for academics and practitioners of urban planning and sustainability, *Europe Cities in Transition* is an innovative roadmap for sustainability in changing cities.

The CityForm Consortium's latest book, *Dimensions of the Sustainable City*, is the first book to report on an empirical, multi-disciplinary study specifically designed to address urban sustainability, drawing together the various dimensions of sustainability: economic, social, transport, energy, and ecological. The book examines their relationships both to each other and to urban form. The book investigates the sustainability dimensions of cities through a series of projects based on a common list of elements of urban form, and which draw on the Consortium's latest research to review the sustainability issues of each dimension. The elements of urban form include density, land use, location, accessibility, transport infrastructure, and characteristics of the built environment. The book also addresses issues such as adapting cities, psychological and ecological benefits of green space, and sustainable lifestyles. Each presenting a critical review of the relevant literature followed by an empirical analysis presenting the key results based on studies across five UK cities, the book draws out findings of relevance to sustainable cities worldwide, as well as an invaluable reference to researchers in sustainable planning and urban design. The book will provide a useful text for advanced undergraduate and graduate courses and for policy makers dealing with these issues. The CityForm Consortium is a multi-disciplinary group of researchers from five universities funded by the UK Engineering and Physical Sciences Research Council from 2003-07.
