healthy waterways and oceans are essential for our increasingly urbanised world yet monitoring water quality in aquatic environments is a challenge as it varies from hour to hour due to stormwater and currents being at the base of the aquatic food web and present in huge numbers plankton are strongly influenced by changes in environment and provide an indication of water quality integrated over days and weeks plankton are the aquatic version of a canary in a coal mine they are also vital for our existence providing not only food for fish seabirds seals and sharks but producing oxygen cycling nutrients processing pollutants and removing carbon dioxide from our atmosphere this second edition of plankton is a fully updated introduction to the biology ecology and identification of plankton and their use in monitoring water quality it includes expanded illustrated descriptions of all major groups of freshwater coastal and marine phytoplankton and zooplankton and a new chapter on teaching science using plankton best practice methods for plankton sampling and monitoring programs are presented using case studies along with explanations of how to analyse and interpret sampling data plankton is an invaluable reference for teachers and students environmental managers ecologists estuary and catchment management committees and coastal engineers

the st croix is one of three rivers discharging into the bay of fundy through passamaquoddy bay which supports the most productive fishery in the bay of fundy mean tidal amplitude at the head of the estuary is 6.1 m which combined with the considerable discharge from the st croix contributes to the generally high suspended load characteristic of the estuary the spring and autumn phytoplankton maxima are therefore restricted vertically by rapid light attenuation and distributed horizontally in somewhat patch fashion the groups of phytoplankton covered in this guide include diatoms the loricate chrysophytes of the genus *Binobryon* and the dinoflagellates keys are provided for the identification of 108 diatoms 7 species of dinobryon and 8 dinoflagellate taxa comments are included about the collection of phytoplankton together with some guidance on the cleaning and preservation of diatoms
