the need for a comprehensive survey type exposition on formal languages and related mainstream areas of computer science has

been evident for some years if the early 1970s when the book formal languages by the second quite feasible to write a comprehensive mentioned editor appeared it was still book with that title and include also topics of current research interest this would not be possible anymore a standard sized book on formal languages would either have to stay on a fairly low level or else be specialized and restricted to some narrow sector of the field the setup becomes drastically different in a collection of contributions where the best authorities in the world join forces each of them concentrating on their own areas of specialization the present three volume handbook constitutes such a unique collection in these three volumes we present the current state of the art in formal language theory we were most satisfied with the enthusiastic response given to our request for contributions by specialists representing various subfields the need for a handbook of formal languages was in many answers expressed in different ways as an easily accessible historical reference a general source of information an overall course aid and a compact collection of material for self study we are convinced that the final result will satisfy such various needs the theory of formal languages constitutes the stem or backbone of the field of science now generally known as theoretical computer science

the book comprises select proceedings of the first international conference on advances in electrical and computer technologies 2019 icaect 2019 the papers presented in this book are peer reviewed and cover wide range of topics in electrical and computer engineering fields this book contains the papers presenting the latest developments in the areas of electrical electronics communication systems and computer science such as smart grids soft computing techniques in power systems smart energy management systems power electronics feedback control systems biomedical engineering geo informative systems grid computing data mining image and signal processing video processing computer vision pattern recognition cloud computing pervasive computing intelligent systems artificial intelligence neural network and fuzzy logic broad band communication mobile and optical communication network security vlsi embedded systems optical networks and wireless communication this book will be of great use to the researchers and students in the areas of electrical and electronics engineering communication systems and computer science
