the word virus conjures up a scary image just as people don t want to be infected by a virus that might make them sick they don t want their computers and other electronic devices infected by computer viruses this must read guide explains electronic infections and viruses including trojan horses and worms readers can arm themselves using the safety guidelines in the text to help combat and prevent the spread of these damaging computer programs

the book equips students with the end to end skills needed to do data science that means gathering cleaning preparing and sharing data then using statistical models to analyse data

writing about the results of those models drawing conclusions from them and finally using the cloud to put a model into production all done in a reproducible way at the moment there are a lot of books that teach data science but most of them assume that you already have the data this book fills that gap by detailing how to go about gathering datasets cleaning and preparing them before analysing them there are also a lot of books that teach statistical modelling but few of them teach how to communicate the results of the models and how they help us learn about the world very few data science textbooks cover ethics and most of those that do have a token ethics chapter finally reproducibility is not often emphasised in data science books this book is based around a straight forward workflow conducted in an ethical and reproducible way gather data prepare data analyse data and communicate those findings this book will achieve the goals by working through extensive case studies in terms of gathering and preparing data and integrating ethics throughout it is specifically designed around teaching how to write about the data and models so aspects such as writing are explicitly covered and finally the use of github and the open source statistical language r are built in throughout the book key features extensive code examples ethics integrated throughout reproducibility integrated throughout focus on data gathering messy data and cleaning data extensive formative assessment throughout

neuroscience databases a practical guide is the first book providing a comprehensive overview of these increasingly important databases this volume makes the results of the human genome project and other recent large scale initiatives in the neurosciences available to a wider community it extends the scope of bioinformatics from the molecular to the cellular microcircuitry and systems levels dealing for the first time with complex neuroscientific issues and leading the way to a new culture of data sharing and data mining necessary to successfully tackle neuroscience questions aimed at the novice user who wants to access the data it provides clear and concise instructions on how to download the available data sets and how to use the software with a minimum of technical detail with most chapters written by the database creators themselves key databases and topics include neuroinformatics for c elegans gene expression patterns functional analyses of olfactory receptors protein protein interactions based neuronal archives neuronal and network modeling storage and retrieval of experimental data for biophysically realistic modeling analysis of spike trains neural connectivity patterns software tools for neuroimaging data management inspection and sharing
