macroeconomics understanding the global economy 3rd edition is to help students and indeed anyone understand contemporary and past economic events that shape the world we live in and at a sophisticated level but it does so without focusing on mathematical techniques and models for their own sake theory is taken seriously so much so that the authors go to pains to understand the key aspects of theories in a way that will not put people off before they see how theories are useful to analyse issues the authors believe that theories are essential to better understand the world thus the book includes a wealth of historic and current episodes and data to both see how theories can help interpret the world and also to judge their validity economies today are very interconnected what happens in china matters pretty much everywhere and what happens in one even small country in the euro zone has implications for the whole euro area and beyond consequently macroeconomics 3rd edition adopts a very international focus

lionel robbins 1898 1984 is best known to economists for his essay on the nature and significance of economic science 1932 and 1935 to the wider public he is well known for the robbins report of the 1960s on higher education which recommended a major expansion of university education in britain however throughout his academic career at oxford and the london school of economics in the 1920s and as professor of economics at the school from 1929 to 1961 he was renowned as an exceptionally gifted teacher generations of students remember his lectures for their clarity and comprehensiveness and for his infectious enthusiasm for his subject besides his famous graduate seminar his most important and influential courses at lse were the principles of economic analysis which he gave in the 1930s and again in the late 1940s and 1950s as well as the history

of economic thought from 1953 until long after his official retirement this book publishes for the first time the manuscript notes robbins used for his lectures on the principles of economic analysis from 1929 30 to 1934 40 at the outset of his career he took the advice of a senior colleague to prepare his lectures by writing them out fully before he presented them the full notes for most of his pre war lectures survive and are eminently decipherable since he made two major revisions of the lectures in the 1930s the principles notes show both the development of his own thought and the way he incorporated the major theoretical innovations made by younger economists at lse such as john hicks and nicholas kaldor or elsewhere notably joan robinson he intended to turn his lecture notes into a book abandoning the project only when he was asked to chair the committee on higher education in 1960 this volume is not exactly the book he wanted to write but it is a unique record of what was taught to senior undergraduate and graduate economists in those years of high theory it will be of interest to all economists interested in the development of economics in the twentieth century
