this book constitutes the thoroughly refereed post proceedings of the 4th international workshop on computational forensics iwcf 2010 held in tokyo japan in november 2010 the 16 revised full papers presented together with two invited keynote papers were carefully selected during two rounds of reviewing and revision the papers cover a wide range of current topics in computational forensics including authentication biometrics document analysis multimedia forensic tool evaluation character recognition and forensic verification

this textbook is about systematic problem solving and systematic reasoning using type driven design there are two problem solving techniques that are emphasized throughout the book divide and conquer and iterative refinement divide and conquer is the process by which a large problem is broken into two or more smaller problems that are easier to solve and then the solutions for the smaller pieces are combined to create an answer to the problem iterative refinement is the process by which a solution to a problem is gradually made better like the drafts of an essay mastering these techniques are essential to becoming a good problem solver and programmer the book is divided in five parts part i focuses on the basics it starts with how to write expressions and subsequently leads to decision making and functions as the basis for problem solving part ii then introduces

compound data of finite size while part iii covers compound data of arbitrary size like e g lists intervals natural numbers and binary trees it also introduces structural recursion a powerful data processing strategy that uses divide and conquer to process data whose size is not fixed next part iv delves into abstraction and shows how to eliminate repetitions in solutions to problems it also introduces generic programming which is abstraction over the type of data processed this leads to the realization that functions are data and perhaps more surprising that data are functions which in turn naturally leads to object oriented programming part v introduces distributed programming i e using multiple computers to solve a problem this book promises that by the end of it readers will have designed and implemented a multiplayer video game that they can play with their friends over the internet to achieve this however there is a lot about problem solving and programming that must be learned first the game is developed using iterative refinement the reader learns step by step about programming and how to apply new knowledge to develop increasingly better versions of the video game this way readers practice modern trends that are likely to be common throughout a professional career and beyond
