in a general study of sociological theory social processes are usually broken down into three tiers
macrodynamics societies and large scale institutions microdynamics interpersonal encounters and
mesodynamics corporations communities smaller organizations in this seminal work the author pulls
these separate areas of research into one comprehensive general theory of social reality more than
analytical distinctions or research terminology the author demonstrates that the social world actually
unfolds along these three macro micro and meso levels of interaction by developing a set of
explanatory testable repeatable principles the author creates a general empirical framework for
sociological research the three volumes of principles of sociology explore each level of social
dynamics individually with cross references to bring the three together this work will be essential for
researchers in sociological theory and social psychology individual volumes will present new
research of interest for researchers in race and ethnicity stratification demography political sociology
organizations and community movements motivation and emotions

the authors have grouped the theories into three classical families which differ in their views relative
to the prime motives underlying human nature they show how theories are specific examples of more
general points of view called paradigms the theories chosen to represent the three paradigms the
endogenous paradigm exogenous paradigm and the constructivist paradigm were selected because
they met four criteria importance as judged by academic and research psychologists fertility as
judged by the amount of research the theory has generated scope as judged by the variety of
phenomena the various theories explain family resemblance as judged by how well each theory
represents its paradigm the authors present the paradigm case in the lead chapter for each paradigm
this paradigm case is the best example for the paradigm the authors explain why paradigm cases are

important and give them more detailed treatment than other theories in the same paradigm

this book proposes the foundation of the relational approach to biology rejecting the deterministic and reductionist approach of molecular biology although biology has made enormous progress in the last seventy years onto genesis is still conceived as a revelation of information dna recovering the geometric tradition relational biology conceives scientific and epistemological tools cause probability space etc of science in a new way if probabilistic biology and organicism still proposes a biology based on physics with a fundamental invariant relational biology is based on variation its fundamental invariant is variation one of the most important elements of life this is an indispensable book for academics who consider biology from a new theoretical approach in particular for those working in the domains of cancer ontogenesis and evolution

analyzing the structure and growth of major theoretical research programs in the sociological study of group processes this book considers such topics as exchange processes and network structures bargaining and conflict status characteristics and status organizing processes social interaction and legitimation processes

this book deals with applications of quantum mechanical techniques to areas outside of quantum mechanics so called quantum like modeling research in this area has grown over the last 15 years but even already more than 50 years ago the interaction between physics nobelist pauli and the psychologist carl jung in the 1950 s on seeking to find analogous uses of the complementarity principle from quantum mechanics in psychology needs noting this book does not want to advance that society is quantum mechanical the macroscopic world is manifestly not quantum mechanical but

this rules not out that one can use concepts and the mathematical apparatus from quantum physics in a macroscopic environment a mainstay ingredient of quantum mechanics is quantum probability and this tool has been proven to be useful in the mathematical modelling of decision making in the most basic experiment of quantum physics the double slit experiment it is known from the works of a khrennikov that the law of total probability is violated it is now well documented that several decision making paradoxes in psychology and economics such as the ellsberg paradox do exhibit this violation of the law of total probability when data is collected with experiments which test non rational decision making behaviour one can observe that such data often exhibits a complex non commutative structure which may be even more complex than if one considers the structure allied to the basic two slit experiment the community exploring quantum like models has tried to address how quantum probability can help in better explaining those paradoxes research has now been published in very high standing journals on resolving some of the paradoxes with the mathematics of quantum physics the aim of this book is to collect the contributions of world s leading experts in quantum like modeling in decision making psychology cognition economics and finance

written by leading european expert domènec melé this is the ideal companion for students determined to make the business world a more ethical and moral place
