excerpt from bookkeeping and cost accounting for factories the author of this treatise was a bookkeeper and cost accountant for some years before he became an engineer and many times during his career as an engineer and as manager of works he had occasion to install systems of bookkeeping and cost accounting and to audit books in this way and by reading much of the extensive literature on accounting he has kept in touch for over forty years with the development of accounting practice more than twenty years ago he was urged by the president of one of the largest manufacturing corporations in new england to write a book on factory cost accounting but he was then too busy with other matters and the suggested book had to be postponed to the indefinite future some three years ago the suggestion was repeated at a conference of several professional accountants who agreed that the literature on cost accounting was in a most chaotic shape and was altogether unsatisfactory the author then began a serious re study of the subject by reading many of the most recent books both english and american there has been a large crop of them in the last ten years re reading the articles on accounting that had appeared in engineering magazine and in the transactions of the american society of mechanical engineers during the last twenty five years and by visiting many factories and conferring with their managers and cost accountants the result of the study was to confirm the statement that the word chaos properly describes the bulk of the literature and the cost accounting methods in most factories there are many good books on bookkeeping and ordinary accounting and some useful books on certain parts of the general subject of cost accounting but there seems to be a lack of books covering a wide field and representing the host modern practice the principal faults of the existing books may be listed as follows 1 over conservatism adherence to old fashioned theories and fallacies 2 over development of red tape leading to unnecessary clerical work 3 too much variety and novelty of method 4 vagueness and lack of detail in descriptive text 5 incompleteness partial treatment of complex subjects accounting practice in factories and that of professional accountants who are introducing their systems into factories varies all the way from excellent to very poor some accountants are in advance of the books both in theory and in practice others have not yet come abreast of the modern ideas of accounting a few of the fallacies that are rapidly being discarded are that interest on investment forms no part of factory cost that business and selling expense are part of

cost and that a profit cannot arise until a thing is sold wrong methods of distributing burden are most common the ratio of nonproductive to productive labor is by many still considered to be an index of the efficiency of the manager tying the costs to the general books is erroneously supposed to prove the accuracy of the cost accounts inventories are priced and profits and losses are computed on the basis that the goods in the warehouse and stores are worth just what it cost to produce them possibly many months earlier although market values may have advanced or declined in the meantime inventories are inflated by charging to the cost of finished product the cost of keeping part of the factor idle the time has arrived when there is a need for a systematic treatise on cost accounting which will start the student at the beginning with the elementary principles of double entry bookkeeping and lead him through factory accounting to cost accounting giving him not only the fundamental theory in accordance with the views of the ablest modern accountants but also warning him against the time worn fallacies of the older school such a treatise the author has un
