a comprehensive guide to the principles instrumentation and applications of atomic absorption spectroscopy aas focusing on elemental analysis in environmental biological and industrial samples

due to their unique porous properties zeolites also referred to as molecular sieves are used in a variety of applications major uses are in petrochemical cracking ion exchange water softening and purification and in the separation and removal of gases and solvents molecular sieves from basic research to industrial applications volume 158 a b presents over 265 worldwide contributions on the latest developments in zeolitic research readers will find this book which is divided into five sections synthesis characterization adsorption catalysis and novel applications ideal for staying up to date on current research on porous materials comprehensive overview of current research on porous materials contains experimental as well as theoretical input reflecting the increasing overlap between theory and experiment contributions from the world s leading authorities

in biotechnology for fuels and chemicals the twenty ninth symposium leading us and international researchers from academia industry and government exchange cutting edge technical information and update current trends in the development and application of biotechnology for sustainable production of fuels and chemicals this symposium emphasizes advances in biotechnology to produce high volume low price products from renewable resources while improving the environment the major areas of interest include advanced feedstock production and processing enzymatic and microbial biocatalysis bioprocess research and development opportunities in biorefineries and commercialization of biobased products international and domestic progress on producing liquid biofuels especially ethanol and biodiesel is highlighted and related topics including bioseparations and optimal integration of biochemical and thermochemical conversion technologies are featured forward looking and authoritative biotechnology for fuels and chemicals the twenty ninth symposium provides an illuminating overview of current research and development in the production of commodity fuels and chemicals from renewable biomass resources via biochemical and thermochemical routes

the development of new technologies and the increasing demand for mineral resources from emerging countries are responsible for significant tensions in the pricing of non ferrous metals

some metals have become strategic and critical because they are used in many technological applications such as flat panel tvs indium solar panel cells indium lithium ion batteries for electric vehicles lithium cobalt magnets rare earth elements such as neodymium and dysprosium scintillators rare earths and aviation and medical applications titanium their availabilities remain limited the secured supply of these metals is crucial to continue producing and exporting these technologies and because the specific properties of these metals make them essential and difficult to substitute for a given industrial application hydrometallurgy have the advantages of being able to process low grade ores to allow better control of co products and have a lower environmental impact providing that the hydrometallurgical route is optimized and cheap the need to develop sustainable efficient and cheap processes to extract metals from complex and poor polymetallic matrices is real the aim of this book was to highlight recent advances related to hydrometallurgy to face new challenges in metal production

atomic absorption spectroscopy is an analytical technique used for the qualitative and quantitative determination of the elements present in different samples like food nanomaterials biomaterials forensics and industrial wastes the main aim of this book is to cover all major topics which are required to equip scholars with the recent advancement in this field the book is divided into 12 chapters with an emphasis on specific topics the first two chapters introduce the reader to the subject its history basic principles instrumentation and sample preparation chapter 3 deals with the elemental profiling functions biochemistry and potential toxicity of metals along with comparative techniques chapter 4 discusses the importance of sample preparation techniques with the focus on microextraction techniques keeping in view the importance of nanomaterials and refractory materials chapters 5 and 6 highlight the ways to characterize these materials by using aas the interference effects between elements are explained in chapter 7 the characterizations of metals in food and biological samples have been given in chapters 8 11 chapter 12 examines carbon capture and mineral storage with the analysis of metal contents
