this astute social and cultural history of physics explores how the development of physics has been intertwined with the rising power of institutionalized religion and how both these predominantly masculine pursuits have influenced women's ability to join the physics community the science itself and the picture of reality it portrays

reading popular physics is a valuable contribution to our understanding of the nature and implications of physics popularizations a literary critic trained in science elizabeth leane treats popular science writing as a distinct and significant genre focusing particularly on five bestselling books stephen hawking's a brief history of time steven weinberg's the first three minutes james gleick's chaos mitchell waldrop's complexity and gary zukav's the dancing wu li masters leane situates her examination of the texts within the heated interdisciplinary exchanges known as the science wars focusing specifically on the disputed issue of the role of language in science her use of literary analysis reveals how popular science books function as sites for disciplinary skirmishes as she uncovers the ways in which popularizers of science influence the public in addition to their explicit discussion of scientific concepts leane argues these authors employ subtle textual strategies that encode claims about the nature and status of scientific knowledge claims that are all the more powerful because they are unacknowledged her book will change the way these texts are read offering readers a fresh perspective on this highly visible and influential genre

american religion steven goldberg claims has fallen into a trap just at the moment when it has amassed the political strength and won the legal right to participate effectively in public debate it has lost its distinctive voice instead of speaking of human values goals and limits it speaks in the language of science in the united states science has extraordinary influence and respect american religious leaders

seeking prestige for their point of view regularly couch their responses to technological developments or defend their faith in scientific terms they claim for instance that medical studies demonstrate the power of prayer that science validates the bible including its account of creation and that patenting the genetic code is dangerous because genes are the essence of who we are but when ministers priests and rabbis expound on double blind studies and the genetic causes of behavior they do not elevate religion goldberg maintains they trivialize it seduced by science examines how by allowing scientific discourse to set the terms of the debate american religious leaders facilitate religion s move away from its more appropriate and important concerns of values morality and humility science can tell us a lot about what is but precious little about what ought to be and our religious leaders often miss the chance to add an important voice from a faith based perspective to the public debate that follows scientific advances discussing the most recent and pressing collisions between science and religion such as the medicinal benefits of prayer the human genome project and cloning goldberg raises the timely question of what the appropriate role of religion might be in public life today tackling the legal aspects of religious debate goldberg suggests ways that religious leaders might confront new scientific developments in a more meaningful fashion

an introduction to the life of the mathematician and philosopher pythagoras

written by distinguished historians of science and religion the thirty essays in this volume survey the relationship of western religious traditions to science from the beginning of the christian era to the late twentieth century this wide ranging collection also introduces a variety of approaches to understanding their intersection suggesting a model not of inalterable conflict but of complex interaction tracing the rise of science from its birth in the medieval west through the scientific revolution the contributors

describe major shifts that were marked by discoveries such as those of copernicus galileo and isaac newton and the catholic and protestant reactions to them they assess changes in scientific understanding brought about by eighteenth and nineteenth century transformations in geology cosmology and biology together with the responses of both mainstream religious groups and such newer movements as evangelicalism and fundamentalism the book also treats the theological implications of contemporary science and evaluates recent approaches such as environmentalism gender studies social construction and postmodernism which are at the center of current debates in the historiography understanding and application of science contributors colin a russell david b wilson edward grant david c lindberg alnoor dhanani owen gingerich richard j blackwell edward b davis michael p winship john henry margaret j osler richard s westfall john hedley brooke nicolaas a rupke peter m hess james moore peter j bowler ronald l numbers steven j harris mark a noll edward j larson richard olson craig sean mcconnell robin collins william a dembski david n livingstone sara miles and stephen p weldon

ian g barbour is the internationally acknowledged pioneer in the field of science and religion although public opinion is often swayed by strident voices which attempt to place science and religion in conflict or keep them totally isolated barbour s voluminous contributions over the past fifty years have carved out a trusted pathway to constructive dialogue and creative mutual interaction between science and religion fifty years in science and religion brings together nineteen leading scholars in the field to offer an appreciative yet critical assessment of the impact of barbour s work on science and religion and to point ahead towards future critical areas goals and tasks that await new research and visionary exploration this book includes a unique autobiography by barbour in which for the first time he shares and reflects on his life and work and a detailed bibliography of barbour s works together the authors demonstrate how barbour s writings and the hundreds of scholars who have now become part of the

field have changed the course of intellectual history in the west by making possible and necessary a truly constructive engagement between science and religion in the context of inter religious dialogue and the global human and environmental challenges of our time

book of essays explores vital connections between science christian faith and vocation in the postmodern world

reinventing ourselves examines the experiences and lessons from over 20 different institutions pioneering new approaches for more effective teaching and learning many of the colleges included in this volume began as both educational and social experiments representing new ways of thinking about educational goals curricular organization institutional governance and faculty roles and rewards with new calls for both rethinking our approaches to teaching and learning and for reviewing the traditional boundaries within institutions and between disciplines reinventing ourselves offers a rich store of ideas from which to draw
