in this two volume set talmy approaches the question of how language organizes conceptual material both at a general level and by analyzing a crucial set of particular conceptual domains space and time motion and location causation and force interaction and attention and viewpoint one of a two volume set defining the field of cognitive semantics leonard talmy approaches the question of how language organizes conceptual material both at a general level and by analyzing a crucial set of particular conceptual domains space and time motion and location causation and force interaction and attention and viewpoint talmy maintains that these are among the most fundamental parameters by which language structures conception by combining these conceptual domains into an integrated whole talmy shows we advance our understanding of the overall conceptual and semantic structure of natural language volume one examines the fundamental systems by which language shapes concepts

this comprehensive handbook summarizes existing work and presents new concepts and empirical results from leading scholars in the multidisciplinary field of behavioral and cognitive geography the study of the human mind and activity in and concerning space place and environment it provides the broadest and most inclusive coverage of the field so far including work relevant to human geography cartography and geographic information science

perception and cognition are tightly related as our primary mode of contact with the world perception is the informational and causal foundation of our cognitive processes it is fundamental to our empirical thinking believing and action planning traditional accounts of the mind consider

perception and cognition to be distinct yet highly interrelated systems much interdisciplinary empirical and theoretical work from cognitive scientists and philosophers has attempted to elucidate the complex relations holding among these systems suggesting the existence not only of influences of perception on cognition but also vice versa however many questions are left unanswered given that perception is a guide to our thinking about and acting upon the world appropriately the two systems must be able to talk to one another information carried by perception must be of a form adequate to be taken in by our various cognitive systems the question arises what kinds of structural similarities must hold between perceptual and cognitive representations for such communication to be possible and how exactly do perceptual and cognitive representations interact some researchers have argued that the links between perception and cognition are so tight as to instill doubt as to the significance of the distinction between the two systems in the first place yet others insist that perception and cognition remain distinct the aim of this research topic is to deepen our understanding of the kinds of interaction among perception and cognition and of the nature of the representational structures that would enable such interaction provided by publisher

encompasses a variety of topics under the umbrella of pragmatic meaning and cognition this includes theoretical perspectives on pragmatic meaning deixis speech acts and implicature are also covered

this volume assembles supporters and critics of situated cognition research to evaluate the intricacies prerequisites possibilities and scope of a 4e methodology the contributions are divided into three categories the first category entails papers dealing with a 4e methodology from the perspective of epistemology and philosophy of science it discusses whether to support explanatory pluralism or explanatory unification and focuses on possible compromises between ecological psychology and enactivism the second category addresses ontological questions regarding the synchronic and diachronic constitution of cognitive phenomena the localization of cognitive processes and the theoretical issue of mutual manipulability the third category analyzes how the theoretical and practical commitments of 4e approaches lead to empirically supported investigations of different phenomena such as research on affordances and chronic pain the book renews attention to the possible adverse consequences coming along with methodical fragmentation as found among 4e positions it provides an overdue first step towards a systematic and positive answer to methodological concerns in situated cognition research without this and further steps in the future the growth of 4e s significance for the scientific study of the mind might

stall or even decrease with such steps situated cognition research could realize its frequently highlighted but so far not comprehensively accessed potential to change radically the modalities of how cognitive phenomena are studied this volume is of interest to scholars of the philosophy of mind

the articles in this collection are centred around the question of what can be meant by assuming that change is a property of language either from general points of view or in the light of specific examples the following main topics are discussed language use and language change as interrelated manifestations of human cognition the directionality of linguistic development the predictability of language change methods of semantic reconstruction aims of explaining language change and restrictions in doing so the relationship between cognitive linguistics and philology

the last indian war was fought against native american children in the dormitories and classrooms of government boarding schools only by removing indian children from their homes for extended periods of time policymakers reasoned could white civilization take root while childhood memories of savagism gradually faded to the point of extinction in the words of one official kill the indian and save the man education for extinction offers the first comprehensive account of this dispiriting effort

much more than a study of federal indian policy this book vividly details the day to day experiences of indian youth living in a total institution designed to reconstruct them both psychologically and culturally the assault on identity came in many forms the shearing off of braids the assignment of new names uniformed drill routines humiliating punishments relentless attacks on native religious beliefs patriotic indoctrinations suppression of tribal languages victorian gender rituals football contests and industrial training especially poignant is adams s description of the ways in which students resisted or accommodated themselves to forced assimilation many converted to varying degrees but others plotted escapes committed arson and devised ingenious strategies of passive resistance adams also argues that many of those who seemingly cooperated with the system were more than passive players in this drama that the response of accommodation was not synonymous with cultural surrender this is especially apparent in his analysis of students who returned to the reservation he reveals the various ways in which graduates struggled to make sense of their lives and selectively drew upon their school experience in negotiating personal and tribal survival in a world increasingly dominated by white men the discussion comes full circle when adams reviews the government s gradual retreat from the assimilationist vision partly because of persistent student resistance but also partly because of a complex and sometimes contradictory set of progressive humanitarian and racist motivations policymakers did eventually come to view boarding schools less enthusiastically based upon extensive use of government archives indian and teacher autobiographies and school newspapers adams s moving account is essential reading for scholars and general readers alike interested in western history native american studies american race relations education history and multiculturalism
