laser fundamentals published in 2004 provides an introduction to the physical and engineering principles of laser operation and design

the second international conference on trends in quantum electronics tqe 85 was held

in bucharest at the national centre for physics in september 1985 and brought together more than 350 scientists from 22 countries in accordance with the objectives established at the first conference which was held in 1982 in conjunction with the third international summer school in coherent optics the second conference concentrated upon the central topics and chief directions of development in quantum electronics which stands out as an area of science and technology that is currently expanding vigorously on the other hand it was also apparent that the 85 was primarily influenced by the worldwide celebration in 1985 of the 25th anniversary of the laser a moment of prime importance in the development of many frontline fields including communications chemistry biology health care and materials processing a special session was devoted to this anniversary in keeping with the dynamic spirit of the conference the fine quality of the invited lectures and the other contributions set a high scientific standard for the proceedings mention should be made of the posters that were presented throughout the conference these together with the exhibition of books and journals and a display of specialized scientific equipment did much to create a framework for effective communication and stimulating interaction to the benefit of all the participants of invaluable help in the preparation of the conference was the collaboration of the international scientific advisory committee

this book is the first collection of tutorials on nonlinear dynamics of lasers the international spring school on fundamental issues of nonlinear laser dynamics was aimed at young researchers who are interested in working at the forefront of applied nonlinear mathematics and nonlinear laser dynamics in a highly interdisciplinary spirit there were tutorial presentations from 14 internationally recognized top experts from applied mathematics theoretical and experimental physics and engineering disciplines topics included are bifurcation theory the notion of chaos multiple time scale systems and delay equations the dynamics of lasers with optical injection and optical feedback and lasers with spatio temporal dynamics are discussed from the theoretical experimental and device simulation points of view applications of lasers include secure communications pulse generation and telecommunication through optical fibers this mixture of introductory material will benefit an interdisciplinary readership of researchers lecturers and students in the fields of applied mathematics physics and electrical engineering
