this book presents a set theoretical development for the foundations of the theory of atomic and finitely supported structures it analyzes whether a classical result can be adequately reformulated by replacing a non atomic structure with an atomic finitely supported structure it also presents many specific properties such as finiteness cardinality connectivity fixed point order and uniformity of finitely supported atomic structures that do not have non atomic correspondents in the framework of finitely supported sets the authors analyze the consistency of various forms of choice and related results they introduce and study the notion of cardinality by presenting various order and arithmetic properties finitely supported partially ordered sets chain complete sets lattices and galois connections are studied and new fixed point calculability and approximation properties are presented in this framework the authors study the finitely supported fuzzy subsets of a finitely supported set and the finitely supported fuzzy subgroups of a finitely supported group several pairwise non equivalent definitions for the notion of infinity dedekind infinity mostowski infinity kuratowski infinity tarski infinity ascending infinity are introduced compared and studied in the new framework relevant examples of sets that satisfy some forms of infinity while not satisfying others are provided uniformly supported sets are analyzed and certain surprising properties are presented finally some variations of the finite support requirement are discussed the book will be of value to researchers in the foundations of set theory algebra and logic

in this book the authors present an alternative set theory dealing with a more relaxed notion of infiniteness called finitely supported mathematics fsm it has strong connections to the fraenkel mostowski fm permutative model of zermelo fraenkel zf set theory with atoms and to the theory of generalized nominal sets more exactly fsm is zf mathematics rephrased in terms of finitely supported structures where the set of atoms is infinite not necessarily countable as for nominal sets in fsm sets are replaced either by invariant sets sets endowed with some group actions satisfying a finite support requirement or by finitely supported sets finitely

supported elements in the powerset of an invariant set it is a theory of invariant algebraic structures in which infinite algebraic structures are characterized by using their finite supports after explaining the motivation for using invariant sets in the experimental sciences as well as the connections with the nominal approach admissible sets and gandy machines chapter 1 the authors present in chapter 2 the basics of invariant sets and show that the principles of constructing fsm have historical roots both in the definition of tarski logical notions and in the erlangen program of klein for the classification of various geometries according to invariants under suitable groups of transformations furthermore the consistency of various choice principles is analyzed in fsm chapter 3 examines whether it is possible to obtain valid results by replacing the notion of infinite sets with the notion of invariant sets in the classical zf results the authors present techniques for reformulating zf properties of algebraic structures in fsm in chapter 4 they generalize fm set theory by providing a new set of axioms inspired by the theory of amorphous sets and so defining the extended fraenkel mostowski efm set theory in chapter 5 they define fsm semantics for certain process calculi e g fusion calculus and emphasize the links to the nominal techniques used in computer science they demonstrate a complete equivalence between the new fsm semantics defined by using binding operators instead of side conditions for presenting the transition rules and the known semantics of these process calculi the book is useful for researchers and graduate students in computer science and mathematics particularly those engaged with logic and set theory

between the reigns of augustus and septimius severus the eastern provinces of the roman empire frequently saw brutal fighting most notably during the conquest of dacia by trajan the suppression of the great revolt in judea and intermittent clashes with rome's great rival parthia in these wars roman soldiers had to fight in a range of different climates and terrains from the deserts of the middle east to the islands of the eastern mediterranean using full colour artwork this book examines the variation of equipment and uniforms both between different military units and in armies stationed in different regions of the empire using evidence drawn from recent archaeological finds it paints a vivid portrait of roman army units in the eastern provinces in the first two centuries of the imperial period

this book provides a comprehensive overview of cardiovascular diseases cvds and associated conditions it is organized into three sections on cardiovascular pathophysiology cardiovascular diagnostics and cardiovascular treatments chapters address such topics as the role of obesity in cvd cardiotoxicity cardio oncology cvd in different disease states modalities for detecting cvd interventional strategies to prevent or treat cvd and much more

drawing upon the latest literary and archaeological research this is an in depth study of the roman army units based in the eastern provinces during the turbulent third century of the roman empire in this book eminent roman historian dr raffaele d'amato looks at the notoriously under represented history of the roman armies during the middle 3rd century whose records have been obscured by the chaotic civil wars of that period between usurpers to the imperial authority of rome following on from the previous title maa 527 roman army units in the western provinces 2 3rd century ad this book considers the evidence for troops in the eastern half of the empire specifically around the balkans mesopotamia the middle east and north africa and looks at the weakness of imperial central authority which inevitably led to local particularism and a wide range of appearance in regional commands dr d'amato uses literary painted sculptural and archaeological

sources to reconstruct this little understood period of roman military history and with the aid of meticulous coloured artwork photos and detailed charts reconstructs the appearance and campaigns of the roman forces stationed in the east
