the discipline area of physical education has historically struggled for legitimacy sometimes being seen as a non serious pursuit in educational terms compared to other subjects within the school curriculum this book represents the first attempt in nearly thirty years to offer a coherent philosophical defence and conceptualisation of physical education and sport as subjects of educational value and to provide a philosophically sound justification for their inclusion in the curriculum the book argues that rather than relegating the body to un thinking learning a person s essential being is not confined to their rationality but involves an embodied dimension it traces the changing conceptions of the body in philosophy and theology that have influenced our understanding of physical education and sport and investigates the important role that embodiment and movement play in learning about through and in physical education physical education is defended as a vital and necessary part of education because the whole person goes to school not just the mind but the thinking feeling and acting facets of a person it is argued that physical education has the potential to provide a multitude of experiences and opportunities for students to become aware of their embodiment explore alternative modes of awareness and to develop insights into and new modes of being not available elsewhere in the curriculum and to influence moral character through the support of a moral community that is committed to that practice representing a sophisticated and spirited defence of the educational significance and philosophical value of physical education and sport this book will be fascinating reading for any advanced student or researcher with an interest in physical education the philosophy of sport or the philosophy of education

it is often said that there is no philosophy of science but only the philosophies of certain scientists but in so far as we recognize an authoritative body of opinion which decides what is and what is not accepted as present day physics there is

an ascertainable present day philosophy of physical science it is the philosophy to which those who follow the accepted practice of science stand committed by their practice this book contains the substance of the course of lectures which the author eddington delivered as tanner lecturer of trinity college cambridge in the easter term 1938 the lectures have afforded him an opportunity of developing more fully than in his earlier books the principles of philosophic thought associated with the modern advances of physical science

first published in new york in 1867 this popular book went into many editions and translations bellows was famous for his pioneering research into the effects of diet and nutrition on human fitness and strength catalog description b l rootenberg

this classic work in the philosophy of physical science is an incisive and readable account of the scientific method pierre duhem was one of the great figures in french science a devoted teacher and a distinguished scholar of the history and philosophy of science this book represents his most mature thought on a wide range of topics

major thinkers in various intellectual disciplines are featured in thinkers of the twentieth century your patrons will find this guide a perfect start to their studies on 450 intellectuals from philosophy theology literary criticism aesthetics history social sciences politics and the sciences entries are divided into two parts part one includes a biography complete bibliography and reading list of the major books and articles written about the entrant part two consists of an extended 1 000 to 3 000 word essay on the entrant these essays explain in clear comprehensible language the work of the entrant and his her influence on the intellectual of the 20th century

this book addresses a tightly knit cluster of questions in the philosophy of mind there is the question are mental properties identical with physical properties an affirmative answer would seem to secure the truth of physicalism regarding the mind i e the belief that all mental phenomena obtain solely in virtue of physical phenomena if the answer is negative then the question arises can this solely in virtue of relation be understood as some kind of dependence short

of identity and answering this requires answering two further questions exactly what sort of dependence on the physical does physicalism require and what is needed for a property or phenomenon to qualify as physical it is argued that multiple realizability still provides irresistible proof especially with the possibility of immaterial realizers that mental properties are not identical with any properties of physics chemistry or biology after refuting various attempts to formulate nonreductive physicalism with the notion of realization a new definition of physicalism is offered this definition shows how it could be that the mental depends solely on the physical even if mental properties are not identical with those of the natural sciences yet it is also argued that the sort of psychophysical dependence described is robust enough that if it were to obtain then in a plausible and robust sense of physical mental properties would still qualify as physical properties
