health related behaviors play positive or negative roles in people's health for instance health risk behaviors such as sedentary behaviors e.g. binge watching tv and playing computer games the use of alcohol tobacco or other substances and lack of sleep have been found to negatively affect the physical and mental health of people on the other hand some studies show that health promoting behaviors such as physical activity and healthy dietary habits can mitigate or reverse the negative effects of health risk behaviors on health outcomes in the meantime some studies indicate that the harmful effects of some health risk behaviors may not be mitigated by health promoting behaviors for instance some studies show that sedentary behaviors and physical activity are independently associated with some physical and mental health outcomes interventions to increase physical activity with and without decreasing sedentary time lead to different health outcomes clearly more research is needed to show the interaction between health promoting behaviors and health risk behaviors in health which could shed light on the management of health related behaviors

the task of object localization in medical images is a corner stone of automatic image processing and a prerequisite for other medical imaging tasks in this thesis we present a general framework for the automatic detection and localization of spatially correlated key points in medical images based on a conditional random field crf the problem of selecting suitable potential functions knowledge sources and defining a reasonable graph topology w.r.t the dataset is automated by our proposed data driven crf optimization we show how our fairly simple setup can be applied to different medical datasets involving different image dimensionalities i.e. 2d and 3d image modalities i.e. x ray ct mri and target objects ranging from 2 to 102 distinct key points by automatically adapting the crf to the dataset while the used general default configuration represents an easy to transfer setup it already outperforms other state of the art methods on three out of four datasets by slightly gearing the proposed approach to the fourth dataset we further illustrate that the approach is capable of reaching state of the art performance of highly sophisticated and data specific deep learning based approaches additionally we suggest and evaluate solutions for common problems of graph based approaches such as the reduced search space and thus the potential exclusion of the correct solution better handling of spatial outliers using latent variables and the incorporation of invariant higher order potential functions each extension is evaluated in detail and the whole method is additionally compared to a rivaling convolutional neural network based approach on a hard problem i.e. the localization of many locally similar repetitive target key points in terms of exploiting the spatial correlation finally we illustrate how follow up tasks segmentation in this case may benefit from a correct localization by reaching state of the art performance using off the shelf methods in combination with our proposed method

our relations with non human animals are plagued by moral illusions a rational ethic attempts to avoid such moral illusions such that our ends and values become consistent and the means to achieve those ends become most effective this book constructs a rational animal ethic it presents a consistent moral theory of non discrimination and equality that includes animals it shows how to construct a strong foundation for animal rights and equal treatment of all sentient beings these rights can be derived from a new mild welfarist ethic that is less demanding than classical welfarist or utilitarian theories and more concerned about welfare than classical rights based or deontological theories the second part deals with the practice of animal ethics in particular it discusses the most effective means to promote animal welfare and rights topics in high impact practical animal ethics include effective altruism

veganism the welfare footprint alternative protein and wild animal suffering
