covering network designs discrete convex analysis facility location and  
clustering problems matching games and parameterized complexity this  
book discusses theoretical aspects of combinatorial optimization and graph  
algorithms contributions are by renowned researchers who attended nii  
shonan meetings on this essential topic the collection contained here

provides readers with the outcome of the authors research and productive meetings on this dynamic area ranging from computer science and mathematics to operations research networks are ubiquitous in today's world the online social networks and search and query click logs can lead to a graph that consists of vertices and edges such networks are growing so fast that it is essential to design algorithms to work for these large networks graph algorithms comprise an area in computer science that works to design efficient algorithms for networks here one can work on theoretical or practical problems where implementation of an algorithm for large networks is needed in two of the chapters recent results in graph matching games and fixed parameter tractability are surveyed combinatorial optimization is an intersection of operations research and mathematics especially discrete mathematics which deals with new questions and new problems attempting to find an optimum object from a finite set of objects most problems in combinatorial optimization are not tractable i.e. NP-hard therefore it is necessary to design an approximation algorithm for them to tackle these problems requires the development and combination of ideas and techniques from diverse mathematical areas including complexity theory algorithm theory and matroids as well as graph theory combinatorics convex and nonlinear optimization and discrete and convex geometry overall the book presents recent progress in facility location network design and discrete convex analysis

the book brings together an overview of standard concepts in cooperative game theory with applications to the analysis of social networks and hierarchical authority organizations the standard concepts covered include the multi linear extension the core the shapley value and the cooperative potential also discussed are the core for a restricted collection of formable coalitions various core covers the myerson value value based potentials and share potentials within the context of social networks this book discusses the measurement of centrality and power as well as allocation rules such as the myerson value and hierarchical allocation rules for hierarchical organizations two basic approaches to the exercise of authority are explored for each approach the allocation of the generated output is developed each chapter is accompanied by a problem section allowing this book to be used as a textbook for an advanced graduate course on game theory

food process engineering a branch of both food science and chemical engineering has evolved over the years since its inception and still is a rapidly changing discipline while traditionally the main objective of food process engineering was preservation and stabilization the focus today has shifted to enhance health aspects flavour and taste nutrition sustainable production food security and also to ensure more diversity for the increasing demand of consumers the food industry is becoming increasingly competitive and dynamic and strives to develop high quality freshly prepared food

products to achieve this objective food manufacturers are today presented with a growing array of new technologies that have the potential to improve or replace conventional processing technologies to deliver higher quality and better consumer targeted food products which meet many if not all of the demands of the modern consumer these new or innovative technologies are in various stages of development including some still at the r d stage and others that have been commercialised as alternatives to conventional processing technologies food process engineering comprises a series of unit operations traditionally applied in the food industry one major component of these operations relates to the application of heat directly or indirectly to provide foods free from pathogenic microorganisms but also to enhance or intensify other processes such as extraction separation or modification of components the last three decades have also witnessed the advent and adaptation of several operations processes and techniques aimed at producing high quality foods with minimum alteration of sensory and nutritive properties some of these innovative technologies have significantly reduced the thermal component in food processing offering alternative nonthermal methods food processing technologies a comprehensive review three volume set covers the latest advances in innovative and nonthermal processing such as high pressure pulsed electric fields radiofrequency high intensity pulsed light ultrasound irradiation and new hurdle technology each section will have an introductory article covering the basic principles and applications of each technology and in depth articles covering the currently available equipment and or the current state of development food quality and safety application to various sectors food laws and regulations consumer acceptance advancements and future scope it will also contain case studies and examples to illustrate state of the art applications each section will serve as an excellent reference to food industry professionals involved in the processing of a wide range of food categories e g meat seafood beverage dairy eggs fruits and vegetable products spices herbs among others

esta tesis doctoral versa sobre el estudio de la construcción de la atribución del significado en la diseminación de la ciencia en la prensa británica a través del análisis de los recursos utilizados por el periodista para integrar en su narración de los hechos científicos lo que otras fuentes externas han dicho el fenómeno de la atribución en el discurso académico científico y de los medios de comunicación se ha descrito previamente desde una perspectiva interpersonal mediante el análisis de la evaluación y de la teoría de la valoración appraisal además otras investigaciones previas se han centrado también en el estudio de cómo los elementos experienciales de la atribución sin embargo el estudio llevado a cabo en esta tesis doctoral trata de proporcionar una descripción más exhaustiva y una visión global de cómo se construye la atribución desde una perspectiva experiencial el objetivo de esta tesis es explorar cómo los elementos experienciales que construyen la atribución coocurren en cada una de las unidades de voz identificadas y
